# 1. GENERAL REGULATIONS

## 1.1 Mission Statement & Objectives

To provide the ultimate in agility competition, showcasing the highest level of agility training, human/canine partnership, sportsmanship, and athleticism; and enabling all dogs, whether pedigreed or not, to compete in an environment that is solely focused on the sport of agility. The WAO strives to provide reasonable jump height divisions, an excellent and safe competition surface, a competitive environment that is also fun and inspiring, fairness and consistency in judging, and several varieties of contests with maximum runs to adequately test teams for all the skill sets necessary to be the best in dog agility.

## 1.2 Event Information

The Championships are governed by the World Agility Open (WAO) rules and regulations as stated below. The official language of the WAO is English.

## 1.3 Program of Events

### 1.3.1 INDIVIDUAL COMPETITIONS

- **Pentathlon Championship:** 2 (two) rounds of Agility, 2 (two) rounds Jumping, and 1 (one) round Speedstakes
- **Biathlon Championship:** 1 round Jumping and 1 round Agility
- **Games Championship:** 1 round Snooker and 1 round Gamblers
- **Bonus Class:** 1 (one) round Speedstakes

### 1.3.2 TEAM COMPETITION

- **Team Championship:** 2 (two) rounds of Agility, 2 (two) rounds Jumping, and 1 (one) round Speedstakes 4-Dog Relay

## 1.4 Country Team Selection Process

Countries will be responsible for selection of their own team. A country's team management may be an agility organization, a committee, or an individual team manager who is approved by the WAO.

Each country's team selection process must be *non-discriminatory* with regard to both handlers and dogs, and must be approved by WAO to meet this requirement. A country's team selection process must allow for at least 1 (one) dog from each height to win its way into both the Biathlon and the Pentathlon. This must be stated in each country's selection rules. If your team only has 1 (one) win-on spot in each height, that dog is therefore entitled to run in both events. Therefore, the WAO urges countries to consider awarding at least 2 (two) win-on spots in each height, one spot for each event.

Other positions on the country's team may be filled at the discretion of the country's team management.

**If a team manager or coach wishes to try to qualify their own dog for their country's team, they must abide by all published selection rules, just as any other competitor trying out for the team would.**

A country may set their own code of behavior (in addition to WAO's sportsmanship guidelines) and also define participation responsibilities for its team members (such as assisting with fundraising events). This information must be published and given to all team members. It is within the discretion of the country's team management to dismiss a member of the team who is not complying with the code of behavior or who fails to meet their team responsibilities. If, however, the team member being dismissed has earned a win-on spot, team management must contact the WAO Organizing Committee and get the Committee's approval before dismissing that team member.

If a country is unable to travel with their own dogs due to the laws of the host country or excessive travel times and expense, substitute dogs may be provided by the host country or another country. A country must make a request in writing to the WAO Organizing Committee. Requests will be evaluated by the WAO committee on a case-by-case basis.

Each country's team management and team selection criteria must be approved by the WAO organizational committee and will then be made available on the official WAO website: [www.worldagilityopen.com](http://www.worldagilityopen.com).

At WAO's request, team managers must be able to provide an accounting of all collective team fundraising income as well as all expenses collected from individual team members.

Each year only one organization, committee, or team manager for a country may submit a team for the WAO. If there is more than one organization, committee, or individual interested in submitting a team for the same country, then the WAO Organizing Committee will review official written proposals in June prior to the following year's competition.

## 1.5 Automatic Entry for Prior Year's Medalists and International Champions

### 1.5.1 AUTOMATIC ENTRY FOR PRIOR YEAR'S WAO MEDALISTS

The WAO Gold, Silver, and Bronze medalists in each height of the Pentathlon, Biathlon, and Games events are automatically invited to the following year's WAO to compete in the event for which they won a (for example, the 2016 Biathlon medalists are automatically invited to compete in the 2017 Biathlon).

Medal winners will run as wildcard competitors in the relevant event(s) unless they also qualify for their country's WAO team that year. In the latter case, they will run as an *additional* entry for their country's team in the event for which the medal was earned. Therefore, that country will have an extra dog competing in that event. For example, if the 2016 Biathlon 300 gold medalist is from Italy, then Team Italy 2017 will run 4 (four) dogs in the 300 jump height of the Biathlon.

If the medal winner does *not* qualify for their country's WAO team the next year, then they may **only** compete in the event in which they earned a medal the prior year. The competitor may, however, apply for one of the 5 (five) wildcard spots in each height division (see Section 1.6). If they are awarded a wildcard spot, they can run in the class in which they medaled as well as any other individual classes.

### 1.5.2 AUTOMATIC ENTRY FOR PRIOR YEAR'S INTERNATIONAL CHAMPIONS

The individual Gold medalists in each height of the championship events listed below are automatically invited to the following year's WAO to compete as a wildcard in all individual events:

- FCI Agility World Championships: Individual
- FCI Agility Championship of the Américas y el Caribe: Individual
- Open Agility Championship of the Américas y el Caribe: Individual
- European Open: Individual
- IFCS Agility World Championships: All-Around Champion

These wildcards are in addition to the 5 (five) dogs per jump height the WAO Organizing Committee may select each year.

## 1.6 Wildcard Entries

The WAO Organizing Committee may select a maximum of 5 (five) dogs per jump height (in addition to the returning WAO medal winners and international champions from the previous year, as described in Section 1.5) to attend the event as individual competitors in the Pentathlon, Biathlon, and Games championship events.

Handlers who are applying for a wildcard spot must have entered their country's team try-out event. They were either not selected for the team or were unable to attend on the day of the try-out due to exceptional circumstances (to be determined by the WAO Organizing Committee). In addition, wildcard applicants must have demonstrated world-class potential by:

1. Placing in the top three of their country's National finals in the last two years;

2. Placing in the top three of another country's National finals; or
3. Representing their home country at an international event in the last two years.

If you are a competing member of a country's team with one dog, you cannot apply for a wildcard entry with another dog.

If you are offered a reserve/alternate spot on your country's team, you may apply as a wildcard entry. If, however, you apply as a wildcard and also accept the reserve spot, you are obligated to take the team spot if you are called in as a replacement. In that case, you cannot compete as a wildcard and any fees you have paid are forfeited. This does not apply if you do not accept the reserve spot on your team.

If you apply for your country's team with 2 (two) dogs and 1 (one) dog makes the team but 1 (one) dog does not, you cannot decline the team spot you earned to apply as a wildcard with another dog.

Handlers must complete the wildcard entry form and submit it to the WAO Organizing Committee by the Wildcard entry deadline (see the website) in order to be considered for a wildcard spot.

Once a wildcard entry is accepted by the WAO Organizing Committee, the handler has the right to join the country manager's Facebook page and attend the manager's meeting on Wednesday.

Wildcard competitors will run under the WAO flag and **must** wear a WAO uniform.

## **1.7 Dog and Handler Eligibility**

### **1.7.1 DOGS**

Any dog, whether pedigreed or mixed, that is healthy and sound, trained, and over 18 months of age is eligible to participate in the WAO competition.

Bitches in season may compete at the event. They will run in their assigned position in the running order, but with a notation in the running order (such as BIS) so that both other competitors and ring crew are aware. A protective mat will be used at the start line.

Dogs that are blind are not eligible.

Pregnant bitches are not eligible.

Dogs that have been exposed to any infectious disease during the 21 days prior to the event are not eligible.

All dogs are subject to an official vet check at registration and will be unable to compete if the official veterinarian deems that the dog is unfit to compete, or that competing may cause pain and/or considerable damage to the dog's health.

The WAO Organizing Committee may, at its sole discretion, require a dog to have a vet check at any time during the event.

No dog shall compete if it is taped or bandaged or in any way has anything attached to it for medical purposes, unless approved by the event's official veterinarian.

No dog shall compete if it is not listed on the country's official WAO entry form, with the exception wildcard entries.

### **1.7.2 HANDLERS**

The WAO is open to any person, without discrimination, whom acknowledges and agrees to abide by all regulations set forth by the WAO.

At the time of team selection, handlers must be a citizen of the country they represent, or have a birth certificate from that country, or have permanent resident status.

Note that a permanent resident who competes as a representative for their country of residency will be ineligible to compete for their country of citizenship for a period of 3 (three) years following the WAO competition in which they participated, and vice versa. If, however, there has been a significant change in residency and it is no longer feasible for the individual to compete in agility events on a regular basis for the country he or she formerly represented at the WAO (e.g., it's too far to travel), the handler may apply to the

WAO Organizing Committee for an exception to this rule. The WAO will have the final decision in determining the residential status of the handler with regard to entry.

Exhibitors and/or attendees at the WAO are expected to behave in a civilized and sportsmanlike manner toward other people and toward their dogs. Failure to do so may lead to expulsion from the event, and future WAO championships, at the discretion of the WAO Organizing Committee.

Handlers are permitted to run multiple dogs in the event (with exceptions noted for the Team Relay in Section 3.4). However, because there will likely be more than one competition ring running simultaneously, when selecting their teams the WAO encourages each country to consider the implications to team and individual performance with regard to the rules relating to conflicting runs (see Section 4.6).

No handler shall compete if he or she is not listed on the country's official WAO entry form, with the exception of wildcard entries.

All dogs are entered in the WAO at their owners' risk. While every care will be taken, the WAO and the event management will not accept responsibility for loss, damage, or injury however caused to dogs, persons, or property while at the event.

Ring crews and judges will work hard to ensure that jump bars and other equipment is properly set before each run, but the ultimate responsibility of checking the course and making sure that it is appropriate for the dog lies with each dog's handler.

### **1.7.3 POLICY ON REFUSAL OF ENTRY**

The WAO Organizing Committee may refuse the entry of any competitor or dog should the Committee believe that participation by the competitor or dog could be prejudicial to the sport or the event. In such case, the Committee must notify the **country's team manager** in writing upon receipt of the entry.

**Moreover, during the event, the WAO Organizing Committee reserves the right to prohibit a competitor or dog from competing if the Committee determines that participation by that competitor or dog could be prejudicial to the sport or the event.**

The burden of responsibility for the appropriateness of such action rests solely with WAO Organizing Committee.

### **1.7.4 ENTRY CHANGES & SUBSTITUTIONS FOR INJURIES**

After the closing date for entries (1st May), countries may not make changes to their entry except under the following circumstances:

- WAO has made an error and the running order does not match the entry originally submitted
- A dog measures up into a higher height division
- A dog is injured
- A handler is injured

Any dog withdrawn from an event because of injury must be withdrawn from competition for the remainder of the WAO. The dog may be replaced in its runs by any other dog listed on the country's official WAO entry form as long as the change is made on Thursday afternoon, five (5) minutes after the last country's training session ends. The cut-off time will be designated on the event schedule. The replacement dog will have the original dog's running order.

**Exception for Team Championship: If a dog listed on the team nomination form submitted Friday or Saturday morning is injured in an individual class on Friday or Saturday morning, the dog may be replaced by any dog in the same height division on the country's official WAO entry form. The change must be submitted to the manager's table within 10 (ten) minutes of the conclusion of the last morning class. The injured dog must be withdrawn from competition for the remainder of the WAO.**

If a handler is injured and cannot run in an event, a substitute handler may run the original handler's dog as long as the substitute handler was listed on the country's official WAO entry form. The injured handler must be withdrawn from competition for the remainder of the WAO.

## 1.8 Jump Height Divisions

The WAO will adhere to the following jump heights for all events:

JUMP HEIGHT NAME	DOG HEIGHT AT WITHERS	JUMP HEIGHT	A-FRAME HEIGHT	ASCENDING SPREAD LENGTH *	LONG JUMP LENGTH	TIRE HEIGHT AT CENTER
<b>300</b>	320mm & under (12.60")	300mm (11.81")	1.7m (5'7")	260-280mm (10.24-11.02")	600mm (23.62") 2 boards	450mm (17.71")
<b>400</b>	410mm & under (16.14")	400mm (15.75")	1.7m (5'7")	350-370mm (14.17-14.96")	800mm (31.49") 3 boards	550mm (21.65")
<b>525</b>	500mm & under (19.69")	525mm (20.66")	1.7m (5'7")	465-485mm (18.31-19.01")	1050mm (41.33") 4 boards	675mm (26.57")
<b>600</b>	Over 500mm (19.69")	600mm (23.62")	1.7m (5'7")	540-560mm (21.25-22.04)	1200mm (47.24") 5 boards	750mm (29.53")

\* Note: The length of the ascending spread is measured from the front side of the first bar to the back side of the second bar.

- Dogs may jump in a higher height division than their measured height.
- A dog may only jump at one height throughout the entire WAO competition.

## 1.9 Measuring Dogs

All dogs jumping less than 600mm (25.59in) will be measured by a measuring official at registration and certified at the event. If a dog's height exceeds the maximum allowed for the jump height which the dog has entered, the dog will be measured a second time by a second official, the Competition Manager. The decision from this measurement will be final.

If a dog is deemed to be over height, he will be excluded from competing in the height division entered. The dog may be moved up to a higher height division if desired, but the country's entry must still adhere to the maximum of three dogs per height in each individual event; therefore, if they already have three dogs entered at the higher height, one dog would have to be withdrawn from that individual event to accommodate the dog measuring up.

There is one exception to this rule for dogs meeting the following criteria:

- It is the dog's first WAO event
- The dog is from a country where it has been unable to get an official WAO measurement
- The dog is within 5mm of the height cut-off (e.g., 321-325mm in the 320 category).

In this instance, the country may run this dog in the higher height as an additional dog, but they may not replace the dog in the height in which he was originally entered. Therefore, they will still have the same number of total dogs in each event as per their entry form.

Dogs cannot be moved into a lower height division than they entered, even if they measure under the cut-off for the lower height division. The only exception to this will be if another dog on the team measures into a higher height division so that a direct switch can be done; for example, if a 525 dog is measured up to the 600 division but one of the 600 dogs on the team is eligible to jump 525, those two dogs may exchange places in the running order.

Dogs will be measured using official measuring devices. The dog will be placed in a standing position on a flat surface, such as a table. The measurement is taken from the perpendicular line from the top of the dog's withers (top of the shoulder blades) to the flat surface.

Dogs must be able to be measured. Dogs that cower, that are aggressive toward the measuring official, or that are generally difficult while being measured so that an accurate measurement cannot be obtained, may be excluded from competing at the WAO.

Once a dog has an official WAO measurement, the dog does *not* need to be measured again if he competes in subsequent WAO events. If, however, a handler feels that their dog's height has changed (due to age, for example), they may challenge their recorded height and be re-measured. They may challenge only 1 (one) time.

### **1.10 Payment of Fees**

At the time of entry, all countries must pay their entry fees in full. Countries will be charged 1 (one) entry fee that allows them to enter all the events as stated in the rules.

Wildcard cards must pay their fees at the time they are offered the wildcard entry.

Countries and wildcard cards are responsible for paying all banking fees, **PayPal charges**, or credit card fees incurred in relation to sending their payments and the WAO receiving their payments.

WAO does not accept responsibility for any travel, accommodation, food, clothing, or training expenses. These expenses are solely the responsibility of each team, individual, or team management.

Any unpaid fees or shortfalls must be paid prior to the start of the event, or the country's entry is cancelled without recourse.

### **1.11 Rules of Conduct**

The WAO promotes dog agility pursuant to regulations consistent with international standards as a competitive, spectator sport. All competitors, officials, and event personnel shall conduct themselves in a professional and sportsmanlike manner consistent with the foregoing statement of purpose and seek to uphold, and enhance where possible, the image of the sport and WAO through such conduct and actions.

Each competitor and official at an event, including judges, members of the organizing committee, and other key personnel have the responsibility to read and understand WAO rules and regulations, before entering, conducting, or officiating an event. Further, each competitor and manager acknowledges through their entry to the WAO that their participation in the event is a privilege and not a right. By virtue of their entry in the event, managers and competitors acknowledge and agree to comply with all WAO rules and regulations, and agree to accept any sanctions that may be imposed for failure to comply.

The judge has sole responsibility for determining when it is appropriate to excuse a dog and competitor from the ring based on matters related to competitor misconduct. The WAO head officials have sole responsibility for determining when an infraction should result in expulsion of a competitor, manager, or other team official from the event and/or from future events.

The following is a partial list of infractions on which the judge or WAO officials may take action:

- Abuse or harsh handling of a dog on the grounds
- Actions that may have the appearance of abuse of a dog
- Intimidation and/or impolite confrontation of judges, event officials, event helpers, or other competitors
- Continuing to argue a point with the competition manager or event manager after an official decision has been made.
- Willful misconduct or interference with another handler's right to compete

- Language or behavior in the ring construed to be detrimental to the spirit of good sportsmanship or that threatens to reduce the spectator appeal of the event
- Violation of procedural rules
- Violation of any rules of the property/facility where the event is being held, including ignoring no smoking area signage, failure to pick up after your dog, taking your dog into off-limits areas, damage facility property, etc.
- Compulsive, correctional training on the grounds
- Misuse of equipment in the training ring or moving equipment in the training ring
- Creating excessive delays as a failure to respect the authority of event officials
- Willful misrepresentation on entry forms
- Willful misrepresentation of animals
- Dog aggression
- Failure to exercise diligence in the control of the behavior of their dog

## 2. EVENTS

### 2.1 Prizes and Awards

Rosettes and medals will be awarded to the top three placements in each jump height of each WAO event (except in the Team where the entire team receives the placement), and the following titles will be awarded:

- WAO Pentathlon World Champion
- WAO Biathlon World Champion
- WAO Games World Champion
- WAO Team World Champion

In the individual classes, the winner of each jump height in each class of an event will receive a rosette.

In the Team event, members of the winning team in each class will receive rosettes and a memento of their success.

Rosettes will be awarded to the top three placements in each jump height of the Bonus Class.

### 2.2 Pentathlon Championship

This is an individual event and there will be a separate competition for each jump height. Each country can enter 3 (three) dogs per height.

The Pentathlon event will consist of 2 (two) Agility runs, 2 (two) Jumping runs, and a Speedstakes class. The combined results from the five (5) classes determine the **WAO Pentathlon World Champion**. One world champion will be declared in each jump height.

There will be a standard course time and scoring is cumulative; faults (including time faults) are added to time, and the lowest score wins in all aspects of the Pentathlon. Time will be measured to 1/1000th of a second.

Based on cumulative scores after two rounds of the event, the bottom 20% of dogs in each height division (calculated from the number of dogs originally entered in the class) will *not* advance to the third round. In the event of a tie when deciding which dogs will be dropped, the scores from Agility 1 will be used. If there is still a tie, the dogs will compete in a run-off on the Agility 1 or Jumping 1 course, depending on the schedule. No dogs with 2 (two) elimination scores can move on to the third round.

Based on cumulative scores after four rounds of the event, only the top 20 dogs of each height division will be eligible to run in the final round of the Pentathlon, the Speedstakes class. In the event of a tie when deciding which dogs will move to the final round, the scores from Agility 2 will be used followed by Jumping 2, followed by Agility 1, followed by Jumping 1. If there is still a tie, the dogs will compete in a run-off on the Agility 2 or Jumping 2 course, depending on the schedule.

Each individual class will have a winner in each jump height that will be recognized at an awards ceremony. In the event of a tie in any class, the tied dogs will compete in a run-off for this award; however, only the score from each dog's first run will be used to calculate the Pentathlon results.

In the event of a tie for the Pentathlon World Champion, the scores from Speedstakes will be used followed by Agility 2, followed by Jumping 2, followed by Agility 1, followed by Jumping 1. If there is still a tie, the dogs will compete in a run-off on the Speedstakes course.

### 2.2.1 PENTATHLON SCORING

Course faults will be converted to time; for example, a 5-fault penalty will result in 5 seconds being added to a dog's time in any Pentathlon class. So, a dog that has a clear round in 28 seconds in the Jumping 1 round and has 5 faults with a time of 32 seconds in the Agility 1 round will have a total score of 65 (28 seconds + 32 seconds + 5 faults = 65) at that point of the competition, and thus beat a dog that is clear in both runs but with a time of 32 seconds and 34 seconds, giving them a total score of 66 (32 seconds + 34 seconds = 66).

An elimination in any Pentathlon class is 50 faults plus dogs that are eliminated will be given a course time of 50 seconds, regardless of the standard course time.

The maximum course faults a dog can accumulate is 50, whether by elimination or other combined course faults.

Time faults will be treated the same as course faults. For example, if the course time is 50 seconds and a dog runs clear in 51.123 seconds, his score will be 52.246 (51.123 seconds + 1.123 time faults = 52.246).

If a handler is absent for their run in any round of the Pentathlon, they will be removed from the running order for any remaining Pentathlon classes and their score will be recorded as ABS.

## 2.3 Biathlon Championship

There will be a separate competition for each jump height. Each country can enter 3 (three) dogs per height.

The Biathlon event will consist of a Jumping round followed by an Agility round. The combined results of the two classes determine the **Biathlon World Champion**. One world champion will be declared in each jump height.

Scoring is cumulative; least faults wins with time as tie breaker only, in all aspects of the Biathlon. Time will be measured to 1/1000th of a second.

Based on the scores of the Jumping round, only the top 40 dogs in each height division with a score (they cannot have been eliminated in Jumping) will advance to the Agility round.

Each individual class will have a winner in each jump height that will be recognized at an awards ceremony. In the event of a tie in any class, the tied dogs will compete in a run-off for this award; however, only the score from each dog's first run will be used to calculate the Biathlon results.

In the event of a tie for the Biathlon World Champion, the scores from the Agility round will determine the winner. If there is still a tie, the dogs will compete in a run-off on the Agility course.

### 2.3.1 BIATHLON SCORING

Scoring is cumulative; least faults wins with time as tie breaker only. An elimination in any Biathlon class is 50 faults, plus dogs that are eliminated will be given a course time of 50 seconds, regardless of the standard course time.

The maximum course faults a dog can accumulate is 50, whether by elimination or other combined course faults.

If a handler is absent for their Biathlon Jumping run, they will be automatically withdrawn from the Biathlon Agility class and their score will be recorded as ABS.

## 2.4 Games Championship

There will be a separate competition for each jump height. Each country can enter 3 (three) dogs per height.

The Games Championship event will consist of a Snooker round followed by a Gamblers round. The combined results of the two classes determine the **Games World Champion**. One world champion will be declared in each jump height.

Scoring is cumulative; highest number of points wins with time as tie breaker only, in all aspects of the Games Championship.

Based on the scores of the Snooker round, only **the top 30 dogs** in each height division will advance to the Gamblers round.

Each individual class will have a winner in each jump height that will be recognized at an awards ceremony. In the event of a tie in any class, the tied dogs will compete in a run-off for this award; however, only the score from each dog's first run will be used to calculate the Games Championship results.

In the event of a tie for the Games World Champion, the scores from the Gamblers round will determine the winner. If there is still a tie, the dogs will compete in a run-off on the Gamblers course.

### 2.4.1 GAMES SCORING

Dogs will accumulate points in Snooker and Gamblers based on the point systems described later in these rules.

If a handler is absent for their Snooker run, they will be automatically withdrawn from the Gamblers class and their score will be recorded as ABS.

## 2.5 Team Championship

The Team event will consist of 2 (two) Agility runs, 2 (two) Jumping runs, and a Team Relay class. The combined results from the five (5) classes determine the country that will be named the **WAO Team World Champion**.

All of a country's team members are eligible for this event, providing the following height requirements are met: Each country will enter 3 (three) dogs in each of the first four rounds: the 2 (two) Agility rounds and the 2 (two) Jumping rounds. Each of the 3 (dogs) must compete in a different jump height. Since there are 4 (four) jump heights used at the WAO, this means a country will choose not to run a dog in a particular jump height in each of the first 4 (four) classes. However, no height can sit out twice, so that means each jump height for a country will end up running in 3 (three) classes. For example, a country's team entry might look like this:

- Agility 1: 300, 400, 525
- Jumping 1: 300, 525, 600
- Agility 2: 300, 400, 600
- Jumping 2: 400, 525, 600

But the following entry would *not* be allowed because the 600 height sits out twice and therefore only runs 2 (two) times, and the 400 height runs 4 (four) times:

- Agility 1: 300, 400, 525
- Jumping 1: 300, 400, 525
- Agility 2: 300, 400, 600
- Jumping 2: 400, 525, 600

For the fifth round of the event, the Team Relay class, each country will enter 4 (four) dogs, 1 (one) dog from each jump height. The course will be designed so that each dog will jump its correct height during the relay.

Team courses will be made available the morning of the competition and team members must be nominated on the official team nomination form by the deadlines specified on the event timetable. If a country fails to submit a team roster on time, the WAO committee will automatically name a team for that country by selecting the first eligible dogs on the country's original official team entry form.

There will be a standard course time and scoring is cumulative; faults (including time faults) are added to time, and the lowest score wins in all aspects of the Team event. Time will be measured to 1/1000th of a second.

Based on cumulative scores after four rounds of the event, only the top 8 (eight) teams will be eligible to run in the final round of the event, the Team Relay. All four dogs on a team will run this course. In the event of a tie when deciding which teams will move to the final round, the scores from Agility 2 will be used followed by Jumping 2, followed by Agility 1, followed by Jumping 1. If there is still a tie, the dogs will compete in a run-off on the Agility 2 or Jumping 2 course, depending on the schedule.

Each individual class of the Team competition will have a winning team that will be recognized at an awards ceremony. In the event of a tie in any class, each team will select 1 (one) dog to participate in a run-off on that course to decide the winner of the award. However, only the score from each dog's first run will be used to calculate the Team results.

In the event of a tie for the Team World Champion, the teams will compete in a run-off on the Team Relay course.

### **2.5.1 TEAM SCORING**

Course faults will be converted to time; for example, a 5-fault penalty will result in 5 seconds being added to a dog's time in any Team class. For example, a team that has one dog with a clear round in 28 seconds, one dog with 5 faults in 30 seconds, and one dog with 10 faults in a time of 32 seconds in the Jumping 1 round will have a total score of 105 (28 seconds + 30 seconds + 5 faults + 32 seconds + 10 faults = 105) at that point of the competition, and thus beat a team that has three clear runs but with a total time of 106 seconds.

An elimination in any Team class is 50 faults plus dogs that are eliminated will be given a course time of 50 seconds, regardless of the standard course time.

The maximum course faults a dog can accumulate is 50, whether by elimination or other combined course faults.

Time faults will be treated the same as course faults. For example, if the course time is 50 seconds and a dog runs clear in 51.123 seconds, his score will be 52.246 (51.123 seconds + 1.123 time faults = 52.246).

If any handler is nominated on the team form to run in Agility 1 or 2 or Jumping 1 or 2 and is absent for their run, the handler will earn an elimination in that class and their score will be recorded as ABS. The other team members may still run in the class and earn scores. In addition, the eliminated handler may still be nominated to run in another team class.

If any handler nominated on the official form to run in Team Relay is absent for their run, then the team will be disqualified from the Team Pentathlon event.

## 3. CLASSES

### 3.1 Agility

The object of this class is to negotiate a full course of agility equipment. There are a minimum of 19 (nineteen) obstacles and a maximum of 20 (twenty).

All obstacles must be performed in the order and direction defined by the numbers. Numbers should be placed on the appropriate side of the obstacle to designate the direction the obstacle should be taken.

The Agility class *must* include the dogwalk, A-frame, seesaw, and 12 (twelve) weave poles. Other obstacles allowed: pipe tunnel, collapsible tunnel, jumps, tire, spread jumps, wall, and long jump. The table is *not* allowed.

### 3.2 Jumping

The object of this class is to negotiate a course without contact equipment. There are a minimum of 19 (nineteen) obstacles and a maximum of 20 (twenty).

All obstacles must be performed in the order and direction defined by the numbers. Numbers should be placed on the appropriate side of the obstacle to designate the direction the obstacle should be taken.

The Jumping class *must* include jumps and 12 (twelve) weave poles. Other obstacles allowed: pipe tunnel, collapsible tunnel, tire, spread jumps, wall, and long jump. The Jumping class *cannot* include the dogwalk, A-frame, seesaw, or table.

### 3.3 Speedstakes

The object of this class is to negotiate a Jumping course that also includes an A-frame. There are a minimum of 19 (nineteen) obstacles and a maximum of 20 (twenty) obstacles.

All obstacles must be performed in the order and direction defined by the numbers. Numbers should be placed on the appropriate side of the obstacle to designate the direction the obstacle should be taken.

The Speedstakes class *must* include 12 (twelve) weave poles and an A-frame, both of which may be taken up to 2 (two) times each. Other obstacles allowed: pipe tunnel, collapsible tunnel, jumps, tire, spread jumps, wall, and long jump. The Speedstakes class *cannot* include the dogwalk, seesaw, or table.

### 3.4 Team Relay

The object of this class is for 4 (four) dogs and 3 (three) or 4 (four) handlers to work together to perform a relay course as a team.

A handler may run 2 (two) dogs in the relay as long as there is a different handler separating that handler's dogs. A team must run their dogs in jump height order from small to tall. So a handler with 2 (two) dogs could run a 300 dog and a 525 dog or 600 dog, but they could not run a 300 dog and a 400 dog. The handler running 2 (two) dogs must have a helper to restrain the dog that goes second. That helper can be a team member or the team manager. Note that the helper's conduct will be judged as if they are a competitor in the class.

There is 1 (one) dog from each jump height on a team.

Each dog on the team will perform a minimum of 12 obstacles and a maximum of 15 obstacles.

All obstacles must be performed in the order and direction defined by the numbers. Numbers should be placed on the appropriate side of the obstacle to designate the direction the obstacle should be taken.

The Team Relay class *must* include 12 (twelve) weave poles and an A-frame, but it is *not* required that each jump height perform both obstacles. Other obstacles allowed: pipe tunnel, collapsible tunnel, jumps, tire, spread jumps, wall, and long jump. The Team Relay class *cannot* include the dogwalk, seesaw, or table.

The judge shall designate an area for a baton exchange between handlers. The next dog and handler to run for the team will wait in this area for their turn. The following rules apply to the baton exchange:

- The exchange must happen with both handlers and their dogs are within the boundaries of the designated exchange box. Failure to do so will result in 10 faults for a faulty baton exchange.
- The handler waiting in the exchange area may hold or restrain their dog in any way (including gently holding the dog by the scruff of the neck or holding the dog in their arms), providing it is not deemed abusive or harsh by the judge in which case that dog will be eliminated. However, the dog must be on the ground before the baton exchange occurs or the dog will be eliminated.
- The handler waiting in the exchange area to run may have their dog on a lead. However, the lead and/or collar must be removed before the baton exchange occurs or the dog will be eliminated.
- Once a dog and handler have finished and passed the baton, they do not need to remain in the exchange box. However, they must remain in the ring or be assessed a 100 point fault. They may also restrain or leash their dogs *after* the baton exchange.
- 10 faults will be assessed if the baton is dropped or thrown, whether inside the baton exchange area or outside of it. The handler must pick up the baton before they continue on course. Failure to pick up the baton will result in the dog being eliminated. **In addition, if the dog takes an obstacle before the handler has picked up the baton, the dog will be eliminated.**
- If the handler leaves the exchange area without the baton, their dog will be eliminated if it takes an obstacle on the course before the handler retrieves the baton.

If a dog is eliminated, it will be given the maximum score of 50 faults. The clock is still running, so no time penalty is needed. The handler must make a sportsman-like attempt to finish the rest of the course correctly. If the judge deems that an eliminated handler is attempting to gain a time advantage by returning to the exchange area without correctly completing the course, the judge will add 50 seconds to the team’s time.

### 3.5 Gamblers

The goal of Gamblers is to accumulate as many points as possible within the time allotted by the judge, and then to make a strategic decision to perform one of the two short “gamble” sequences within a specified time period to earn bonus points. The competitor who earns the most points wins.

The Gamblers course is set up with the obstacles placed randomly around the ring, without specific flow. Each obstacle is assigned a point value (see table below). A handler earns those points by *successfully* completing the obstacle. An obstacle can be performed only 2 (two) times for points. There is no penalty for taking the obstacle additional times during the opening period (unless the judge deems it is loitering for the gamble as described below), but no points will be awarded.

POINTS	OBSTACLE
1 point	Jumps
2 points	Tunnels Tire Long Jump Spread Jumps Wall Jump
3 points	Seesaw 6 weave poles
4 points	A-frame
5 points	Dogwalk 12 weave poles

If they choose to do so, judges may include a bonus combination of obstacles in their Gamblers course design. The judge will determine the points earned for successful performance of this bonus combination.

Obstacles that are one-directional (that is, the seesaw, spread jumps, the long jump, and collapsible tunnels) must be taken in the correct direction to earn points.

A Gamblers run consists of two parts: an opening period and a gamble period. The first part is the opening period, which has a designated course time of either 25 or 30 seconds set by the judge. Handlers accumulate points by successfully performing obstacles of their choice during this time period. At the end of the opening period, a whistle or horn sounds to indicate the beginning of the gamble period. During the gamble period, handlers will have a specified amount of time to complete their choice of one of two special challenge sequences that are worth bonus points.

### 3.5.1 GENERAL GAMBLERS RULES

- If a start and finish jump are used for timing, these obstacles will not have any point value and must be taken in the direction specified by the judge. The start jump is “live” at all times during the run. This means that if the start jump is taken after the dog has started the run, point accumulation ends and the handler should go directly to the finish jump. Going over the finish jump stops time and ends the run no matter when it is taken. Failure to take the finish jump at the end of the run will result in no time being recorded and the loss of *all* accumulated points.
- If the dog takes an obstacle before taking the start jump to start the clock, he will be eliminated.
- Once the dog has completed the gamble sequence, or if the whistle/horn sounds, the handler must direct the dog to the finish jump to stop the clock. If a dog does not stop the clock (barring a timing failure), all points are lost and 0 (zero) points will be scored.
- There will be no penalty if the dog takes additional obstacles, including running through the weave poles, on route to the finish jump.
- If an obstacle is attempted but not completed successfully (for example, taking the A-frame but missing the contact), a dog may attempt the obstacle again, as many times as necessary to complete it successfully. Alternatively, the handler may choose to move on and attempt a different obstacle without penalty.
- If an attempt at an obstacle is successful, the judge will call out the obstacle value or number of the obstacle. If an attempt is unsuccessful, the judge will call out something to indicate that you have not earned any points (for example: “No,” “Fault,” or “Zero”) and the obstacle may be reattempted immediately if the handler desires.
- The opening period ends when the whistle is blown or the horn sounds. This also designates the beginning of the second part of the run and time begins for the gambles. If, however, a dog is negotiating an obstacle when the horn sounds to end the opening period, points will be awarded if the obstacle has been **completed**, which is the point at which it is no longer possible for the dog to fault the obstacle (that is, landing for jumps, front feet on the ground after having touched the contact zone with at least one foot, front feet have exited a tunnel, head past last weave pole).
- There are no refusals judged during the opening period, but refusals do apply in the gamble period.
- It is up to the judge’s discretion as to whether a dog may perform the same obstacle “back to back” (performing a bi-directional obstacle successfully in one direction and then immediately turning around and performing the obstacle in the opposite direction), perform a contact obstacle followed by another contact, or perform a set of weave poles followed by a contact obstacle or vice versa. This information will be provided by the judge in the written briefing.
- The dog may not take *any* 2 (two) gamble obstacles in the *same* gamble in succession (one after the other) during the opening period. Doing so will result in 0 (zero) points being awarded for the gamble even if it’s successfully completed. Handlers may, however, do the *same* gamble obstacle 2 (two) times successfully for points during the opening. They may also do 1 (one) obstacle in gamble #1 followed by 1 (one) obstacle in gamble #2, or vice versa.
- The handler touching the dog or an obstacle (whether intentional or accidental contact) in a manner that aids the dog’s performance will result in 0 (zero) points being awarded for the obstacle.

- Stopwatches or other timing devices are allowed during the course walk-through, but may not be used as aid during the actual competition.
- The judge has the discretion to apply additional rules to the Gamblers class as long as those rules are defined in the judge's briefing.

### 3.5.2 THE GAMBLE

- The judge will present 2 (two) gamble sequences, one of which will be more challenging and therefore worth more points. It is up to the handler to choose (therefore, to gamble) which option to attempt.  
Option 1 Gamble (less difficult) = 10 points  
Option 2 Gamble (more difficult) = 20 points
- The time allotted for the gamble period shall be determined by the judge's discretion.
- The gamble points shall be awarded if the dog completes the chosen sequence without faults within the specified time.
- The judge may choose to incorporate a distance restriction into either of the gamble sequences, requiring that handlers direct their dogs through the sequence without being next to them. In this case, the judge will use lines on the ground to designate the handler restriction area. The handler must remain outside this marked area and not step on or over the line(s) while they direct the dog to complete the gamble. **The handler is allowed to lean over the line and extend their arm over the line; they just can't step on or over it. In addition,** the dog may cross over the line(s) without any penalty.
- Refusals will be judged in the gamble sequence and will nullify the ability to earn gamble points.

The dog will *not* be awarded the gamble points if any of the following occur:

- The dog fails to complete the sequence within the allotted time and/or incurs faults.
- The handler steps on or over the line when a distance restriction is in effect.
- The dog knocks a bar while taking a gamble jump to earn points in the opening period.
- The handler violates the "No Loitering Rule." Handlers must be actively attempting obstacles to earn points until the moment the horn sounds to end the opening period. If a handler stops a dog on a contact, repeats an obstacle that has already been completed twice successfully for points, or otherwise significantly hesitates while waiting for the horn to blow, will be called for loitering.
- The dog performs consecutive gamble obstacles **within the same gamble** during the opening period.

Any scenario not defined in the rules is at the judge's discretion.

### 3.5.3 GAMBLERS SCORING

Points shall determine the placement of dogs. The run ends when the dog takes the finish jump and stops time. Time is a tiebreaker only.

### 3.6 Snooker

The object of the game is to earn as many points as possible within the course time set by the judge. Scoring is similar to the billiards game of Snooker; however, the judge may place the obstacles in the ring in any position.

The judge will design a course consisting of 3 (three) red jumps and an obstacle representing each of the other Snooker colors. These will be scored as shown in the table below.

COLOR	POINTS
Red jumps	1 point each
Yellow	2 points
Green	3 points
Brown	4 points
Blue	5 points
Pink	6 points
Black	7 points

Snooker consists of two parts. The first part, the opening sequence, allows the dog and handler to collect as many points as possible by successfully completing each red jump followed by any colored obstacle. The maximum number of points available in the opening sequence is 24: 1+7+1+7+1+7. The second part, the closing sequence, requires the dog and handler to complete the colored obstacles (#2 through to #7) in sequential order before the course time has elapsed for a maximum of 27 points.

A Snooker course should be run as follows:

- Start jump
- Red jump, any colored obstacle,
- Red jump (different from first red), any colored obstacle,
- Red jump (different from first and second red), any colored obstacle,
- Yellow #2, green #3, brown #4, blue #5, pink #6, black #7,
- Finish jump

#### 3.6.1 GENERAL SNOOKER RULES

- The start jump has no point value and is used for time only. The start jump must be taken in the direction indicated by the judge. The start jump is “live” at all times during the run. This means that if the start jump is taken after the dog has started the run, it is judged as an off-course. Point accumulation ends and the handler should go directly to the finish jump.
- If the dog takes an obstacle before taking the start jump to start the clock, he will be eliminated.
- The finish jump can be taken in either direction. Going over the finish jump stops time and ends point accumulation if it is taken at any time during the run. Failure to take the finish jump at the end of the run will result in no time being recorded and the loss of all accumulated points.
- Refusals: No refusals are judged in the opening sequence; therefore, the dog will get points as long as the obstacle is done correctly. For example, if the dog misses the weave pole entry but then corrects it and finishes weaving all the poles, points will be awarded. Or, if the dog starts up the A-frame, jumps off the *up ramp*, and then gets back on the obstacle and successfully completes the A-frame, points will be awarded. Refusals are judged in the closing sequence.
- Once the dog enters the weaves correctly, if he does miss a pole, it is a standard fault. The judge will call “Fault” and the handler should continue on to the next red or start the closing. While the handler does not have to complete the weaves in the case of a fault, there is no penalty if he does finish the weaves.

- Once the dog has completed the closing sequence, or if the whistle/horn sounds, the handler must direct the dog to the finish jump to stop the clock. If a dog does not take the finish jump, all points are lost and 0 (zero) points will be scored.
- The course time is set per the judge's discretion and may be different for different height divisions. The objective is for the handler to complete their opening sequence and their closing sequence (#2-#7) within this assigned time. Handlers do *not* have to take the finish jump within the designated course time. The finish jump is used solely to record total time on course in the event of a tie.
- A red jump must be successfully completed, in either direction, in order for the dog to be able to attempt a colored obstacle of #2 through #7. Points are then awarded for successful completion of the colored obstacle.
- Each of the red jumps may only be completed once, whether successful or not (knocked bar).
- Obstacles that are one-directional (that is, the seesaw, spread jumps, the long jump, and collapsible tunnels) must be taken in the correct direction to earn points. If the dog takes a one-directional obstacle in the wrong direction in the opening, no points will be earned and the handler should continue on to the next red or start the closing if no more reds are available.
- For obstacles that are bidirectional, the placement of the course number indicates the approach side of the obstacle in the closing sequence.
- Combination Obstacles: The judge may choose to set up a combination of obstacles to make up any colored obstacle. The judge will designate the order of the combination, but may allow the individual obstacles in the combination to be taken in any direction or flow during the opening sequence. However, the combination must be taken in the designated direction in the closing. If the dog faults a combination obstacle in the opening sequence (the judge will call out the fault), the handler does *not have to finish* the combination and may leave the obstacle to continue to the next red jump or to start the closing. No points will be awarded and time will be wasted if the dog finishes the combination. If the dog faults a combination obstacle in the closing, scoring ends and the run is over.
- Handlers should continue their course until they hear the judge's whistle or the horn sounds to signal the end of time. The judge calling "Fault" only signifies that no points have been earned. It is not an elimination.
- If an obstacle is faulted and the judge's whistle blows, or the buzzer/horn goes off to signal the end of course time, the run is over and the handler should go directly to the finish jump to stop time. There will be no penalty if a dog takes additional obstacles on the way to the finish jump.
- A judge may set a course where scoring three 7s could be deemed difficult to achieve.
- Stopwatches or other timing devices are allowed during the course walk-through, but may not be used as aid during the actual competition.
- The judge has the discretion to apply additional rules to the Snooker class as long as those rules are defined in the judge's briefing.

## OPENING SCENARIOS

Taking a red jump followed by another red jump	Run over, go to finish jump to stop time
Faulting a red jump	Go directly to another red
Faulting the third red jump	Begin closing (#2-#7)
Faulting all red jumps	Begin closing (#2-#7)
Taking the last red jump in the opening followed by the 2-point yellow for points	Repeat #2 yellow to begin closing #2-#7
Faulting a colored obstacle	No points awarded, go to next red if any "unused" reds are remaining; otherwise <b>must</b> start the closing
Handler touching dog or an obstacle (whether intentional or accidental contact) in a manner that aids the dog's performance	No points awarded, go to next red if any "unused" reds are remaining; otherwise start the closing
Refusing a colored obstacle after dog gets on it or in it and then attempting a different colored obstacle	Run over, go to finish jump to stop time. (Must re-do the colored obstacle correctly to get points or go to another red if any "unused" reds are remaining; otherwise <b>must</b> start the closing.)
Dog enters the weave poles, but misses correct entry	No points awarded unless handler chooses to correct the entry and complete the obstacle correctly. Handler may choose instead go to next red if any "unused" reds are remaining; otherwise, <b>must</b> start the closing
Dog jumps off the seesaw before the pivot point, jumps off the dogwalk before the down ramp, or jumps off the A-frame before the down ramp	No points awarded unless handler chooses to re-attempt the obstacle and complete it correctly. Handler may choose instead go to next red if any "unused" reds are remaining; otherwise, <b>must</b> start the closing
Dog enters tunnel or collapsible tunnel (chute) and backs out or exits via the entry	No points awarded unless handler chooses to re-attempt the tunnel and complete it correctly. Handler may choose instead go to next red if any "unused" reds are remaining; otherwise, <b>must</b> start the closing
Taking a colored obstacle followed by another colored obstacle	Run over, go to finish jump to stop time
Taking a combination obstacle out of the judge's specified order	No points awarded, go to next red if any "unused" reds are remaining; otherwise start the closing
Faulting a combination obstacle and then continuing to take obstacles in that combination	No points awarded, go to next red if any "unused" reds are remaining; otherwise start the closing. You are just wasting time by repeating obstacles in the combination.
Missing an obstacle in a combination obstacle	No points awarded. Go to next red if any "unused" reds are remaining; otherwise start the closing. You are just wasting time by repeating obstacles in the combination.
Combination obstacle completed correctly but dog then takes an additional obstacle in the combination	Run over, go to finish jump to stop time
Faulting any part of a combination obstacle	No points awarded, go to next red if any "unused" reds are remaining; otherwise start the closing (a faulted combination obstacle does not have to be completed before going on; if you do so, you are just wasting time)
Taking a one-way colored obstacle taken in the wrong direction	No points awarded, go to next red if any "unused" reds are remaining; otherwise start the closing
Refusal of any red	Not faulted, attempt obstacle and if completed correctly points will be awarded
Refusal of a colored obstacle where dog runs past or spins in front of obstacle	This type of refusal is not judged in Snooker opening

## CLOSING SCENARIOS

Red jump taken	Run over, go to finish jump to stop time
Obstacle(s) taken on way to finish jump after completing black #7 or after second horn or judge's whistle sounds	Not faulted, no additional points received
Colored obstacle taken out of order	Run over, go to finish jump to stop time
Refusal of obstacle	Run over, go to finish jump to stop time
Colored obstacle faulted	Run over, go to finish jump to stop time
Combination obstacle taken out of judge's specified order	Run over, go to finish jump to stop time
Combination obstacle completed correctly but dog then takes an additional obstacle in the combination	Run over, go to finish jump to stop time
Handler touching dog or an obstacle (whether intentional or accidental contact) in a manner that aids the dog's performance	Run over, go to finish jump to stop time

## OPENING AND CLOSING SCENARIOS

Whistle/horn blown for time up while dog is negotiating an obstacle. Negotiating means any part of dog's body has entered or mounted the obstacle.	Points awarded if obstacle has been performed to completion, which is the point at which it is no longer possible for the dog to fault the obstacle (that is, landing for jumps, front feet on the ground after having touched the contact zone with at least one foot, front feet have exited a tunnel, head past last weave pole). Points awarded for a combination only if all obstacles are performed correctly and the last obstacle in combination meets obstacle completion criteria identified in the rules before the whistle/horn is blown for time.
Dog does not take finish jump after game ends	No time, all points lost
If a jump bar is knocked on a colored obstacle, but ring party cannot replace	Provided the dog goes through the uprights on the next attempt of the colored obstacle, points will be awarded
Whistle/horn blows to signal end of time	Run over, go to finish jump to stop time.
Judge blows their whistle	Run over, go to finish jump to stop time

Any scenario not defined in the rules will be left to judge's discretion.

### 3.6.2 SNOOKER SCORING

Points shall determine the placement of dogs. Time is a tiebreaker only. The maximum amount of points that can be earned in the game is 51 points as shown below.

- In the opening sequence, a maximum of 24 points can be earned as follows:
  - Red jump (1 point), black obstacle (7 points)
  - Red jump (1 point), black obstacle (7 points)
  - Red jump (1 point), black obstacle (7 points)
- In the closing sequence, 27 points are earned if all colored obstacles are successfully completed sequentially before maximum course time is up, as follows:
  - 2 (yellow) + 3 (green) + 4 (brown) + 5 (blue) + 6 (pink) + 7 (black)

### **3.7 Bonus Class**

Open to any dog that does not progress to the final round of any of the following events: 1) Gamblers in the Games championship; 2) Agility in the Biathlon championship; or 3) Speedstakes in the Pentathlon championship; will automatically be entered in the Bonus Class.

Handlers will run a Speedstakes course and will be subject to the rules of that class. Course faults will be converted to time; that is, a 5-fault penalty will result in 5 seconds being added to a dog's time. For example, a dog that has 5 faults with a time of 32 seconds will have a score of 65 (32 seconds + 5 faults = 37).

A random running order will be used.

Eligible handlers not wishing to run the Bonus Class should let the manager's table know they wish to withdraw as soon as the announcement is made regarding who is moving on to Speedstakes and Biathlon Agility.

Rosettes will be awarded for placements.

## 4. RUNNING ORDERS & DRAW

Countries will be randomly drawn into three groups. Then the running order in each height in each group will be randomly drawn for the first run of each event and will then proceed as described in the sections below.

### 4.1 Pentathlon

The running order for Round 1 will be randomly drawn for each height in each of the three country groups. A formula will then be applied to determine the running order for the next three rounds (Rounds 2 through 4). The number of dogs entered in the height division will be divided by four (4) and each handler's running order will be moved forward by that number. For example, if 20 dogs are entered, each dog will move forward in the order by 5 positions for the next round. Once a running order gets down to 1 it restarts at the last number; in this example, 20.

Dog	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T
Rd1	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
Rd2	16	17	18	19	20	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Rd3	11	12	13	14	15	16	17	18	19	20	1	2	3	4	5	6	7	8	9	10
Rd4	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	1	2	3	4	5

For the final run, Speedstakes, dogs will run in reverse order of their current Pentathlon placements; for example, the dog that is in first place overall after four rounds will run last in Speedstakes.

### 4.2 Biathlon

The running order for Biathlon Jumping will be randomly drawn for each height in each of the three country groups. For Agility, dogs will run in reverse order of their placement in the Jumping run; for example, the dog that is in first place after Jumping will run last in Agility.

### 4.3 Games

The running order for Snooker will be randomly drawn for each height in each of the three country groups. For Gamblers, dogs will run in reverse order of their placement in the Snooker run; for example, the dog that is in first place in Snooker will run last in Gamblers.

### 4.4 Team

The running order for Round 1 will be randomly drawn in each of the three country groups. A formula will then be applied to determine the running order for the next three runs. The number of teams entered in the height division will be divided by 4 (four) and each team's running order will be moved forward by that number. For example, if 20 teams are entered, each team will move forward in the order by 5 positions for the next round. Once a running order gets down to 1 it restarts at the last number; in this example, 20.

Team	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T
Rd1	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
Rd2	16	17	18	19	20	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Rd3	11	12	13	14	15	16	17	18	19	20	1	2	3	4	5	6	7	8	9	10
Rd4	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	1	2	3	4	5

The team's running order is the same in each height division; for example, if a team runs first in the 600 height that team will also be first in all heights in that round.

When dogs are missing from a height due to team selection, the running order will move up 1 (one).

For the final run, Team Relay, teams will run in reverse order of their current Pentathlon placements; for example, the team that is in first place overall after four rounds will run last in the Relay.

## **4.5 Draw for Height Running Order**

### **4.5.1 INDIVIDUAL AND TEAM**

For the Individual & Teams, a random draw will be conducted by the Organizing Committee prior to the event to determine the order in which the jump heights will run in the first class. The jump heights in the remaining rounds will be alternated to ensure that each height runs in a different position in each class.

If the number of entries or altered ring plans causes heights to conflict, the jump height order may be subject to change but with the intention that each height is rotated through the four positions.

### **4.5.2 BIATHLON AND GAMES**

For the Biathlon and Games classes, it is intended the above formula will be used. After the first round, jump heights will be alternated in each class.

If the number of entries or altered ring plans causes heights to conflict, the jump height order may be subject to change.

## **4.6 General Running Order Rules**

Random draws for running order will take place before the event, but will be supervised by the home country judge or a WAO official.

Handlers will be deemed late and unable to run if they are not present to walk into the ring once the previous dog has crossed the finish line.

In the event of a handler having two or more dogs drawn consecutively, the lowest drawn dog can be moved forward three places in the running order; for example, if a handler's dogs are drawn 5th and 6th, the dog drawn 5th can move up to run 2nd. If the handler does not wish to move a dog; or due to the running order draw, this isn't possible, the handler will be given a 4-minute break (maximum) between dogs. This is the equivalent of three dogs taking 1 minute and 20 seconds to enter the ring, run, and leave the ring. The decision to run earlier or not must be given at check-in on the training day. For finals, the decision to run earlier or not must be given to the competition manager within 1 hour of the official running order being posted.

Bitches in season will run in their assigned position in the group. Team managers must notify the WAO at check-in if they have a bitch in season competing so that a notation can be made in the running orders to alert the ring crew to put out a mat at the start line and to allow other competitors to identify bitches in season in the order. If a bitch comes into season during the event, the manager's table should be notified immediately. Failure to notify WAO officials that you have a bitch in season when you check in, or that your bitch comes into season during the event, will result in elimination and dismissal from the event.

## **5. JUDGING**

### **5.1 Judges**

Judges will be appointed and assigned classes by the WAO committee. It is the intention of the event to appoint judges with different course design styles in order to provide a worldwide reflection of agility. However, the WAO also wants to provide fairness and as much consistency as possible in the judging. To that end, there is a supervising judge appointed to oversee the competition judges and assist them with interpreting WAO rules.

A judge's briefing covering rules and procedures will be held on the Wednesday before the event. Two representatives from each country (plus an interpreter, if required) and wildcards not representing a country will be allowed to attend the briefing.

Class course times will be announced and posted once a course is built. There will not be specific class briefings, but judges will be available at ring side during course walking for any rules clarification. Only team managers, team coaches, and wildcards not representing a country, may ask the judge questions.

Written Gamblers and Snooker briefings will be published on the WAO website at least 2 (two) weeks prior to the event. Only 1 (one) printed copy of the Snooker, Gamblers, and Team Relay briefings will be provided to the team manager at check-in. If desired, judges may also provide written briefings for other classes or general judging comments they wish to express to the competitors.

A judge will signify the difference between a course fault and refusal by using a closed fist for a refusal and an open palm for a normal class fault.

Judging of the course will begin once the timer or judge gives the competitor permission to start. Once a dog has negotiated the last obstacle, stopping the clock, judging of the course will cease unless the performance of this obstacle is faulted; for example, bar knocked and falling.

A competitor's conduct and behavior toward his or her dog will be judged by the judge the entire time the competitor is within the boundaries of the competitive ring.

A judge may decide to use an assistant judge if required; for example; as a line judge in the Gamblers class, a contact judge in an Agility class, or a box judge in the Relay class. In all cases, the final judging decision will be with the class judge.

## 5.2 Course Design

Courses will be designed with a minimum distance of 5 meters (16.5 feet) between obstacles, using the judge's interpretation of the large dog's path. However, when two tunnels are placed side by side or a tunnel is next to a contact obstacle, the minimum distance does not apply.

There is no maximum distance specified; however, it is recommended that courses are designed with the majority of distances between obstacles under 8 meters (26ft).

### 5.2.1 MEASURING THE COURSE & CALCULATING COURSE TIMES

Judges are required to measure their courses to determine the course time. The course will be measured using a surveyor's wheel and shall be measured in units of meters.

Once the course has been measured and the result is rounded up to the nearest whole number, the standard course time (SCT) can be calculated by the judge for the 600 and 525 jump heights. Ten percent (10%) will be added to this time to set the SCT for the 400 and 300 jump heights.

Course times for Snooker and Gamblers are set separately by the judge.

## 6. OBSTACLE PERFORMANCE STANDARDS

All obstacles must meet with the approval of and specifications of WAO as described in Section 6, Appendix. Below is a description of how each obstacle must be performed and the specific faults that can occur on the piece of equipment.

### 6.1 A-frame

The dog must ascend the ramp in the direction designated by the judge, cross the apex, and descend the other ramp, touching any portion of the contact point with any part of his body before dismounting the obstacle. The performance of the obstacle will be considered completed when all four paws touch the ground.

- If the dog does not touch the down contact point with any part of his body, a missed contact fault will be incurred.
- Leaving the obstacle prior to beginning descent of the down ramp shall constitute a refusal.
- If the dog approaches the A-frame at an angle of 90° or more, he must leave the ground to ascend the obstacle before the top line of the up contact or he will incur a refusal.
- Once a dog touches the down ramp with any part of his body, if he leaves the plank before touching the contact point, he will be assessed a missed contact fault, *not* a refusal.
- Ascending the wrong ramp constitutes a wrong course.
- Running under the A-frame constitutes a wrong course except when the dog is attempting a tunnel under the contact (refusal), the contact is the next correct obstacle in sequence (refusal), and in Gamblers and the opening of Snooker.
- Missing the up contact point shall not be faulted.

## 6.2 Dogwalk

The dog must ascend the ramp in the direction designated by the judge, cross the horizontal middle plank, and descend the other ramp, touching any portion of the contact point with any part of his body before leaving the obstacle. The performance of the obstacle will be considered completed when all four paws touch the ground.

- If the dog does not touch the down contact point with any part of his body, a missed contact fault will be incurred.
- Leaving the obstacle prior to touching the down ramp with any portion of his body constitutes a refusal.
- If the dog approaches the dogwalk at an angle of 90° or more, he must leave the ground to ascend the obstacle before the top line of the up contact or he will incur refusal.
- Once a dog touches the down plank with any part of his body, if he leaves the plank before touching the contact point, he will be assessed a missed contact fault, *not* a refusal.
- Ascending the wrong plank constitutes a wrong course.
- Running under the dogwalk constitutes a wrong course except when the dog is attempting a tunnel under the contact (refusal), the contact is the next correct obstacle in sequence (refusal), and in Gamblers and the opening of Snooker.
- Missing the up contact point shall not be faulted.

## 6.3 Seesaw

The dog must ascend the plank, cross the pivot point causing the plank to tip to the ground on the other end, and descend the plank. The plank must touch the ground before the dog leaves the obstacle (at least one paw must remain on the plank). The performance of the obstacle will be considered completed when all four paws touch the ground.

- If the dog does not touch the down contact point with any part of his body, a missed contact will be called.
- If the dog leaves the obstacle before the pivot point, a refusal will be incurred.
- If the dog approaches the seesaw at an angle of 90° or more, he must leave the ground to ascend the obstacle before the top line of the up contact or he will incur refusal.
- Once the dog passes the pivot point with any part of his body, if he leaves the plank before touching the contact point, he will be assessed a missed contact fault, *not* a refusal.
- If the dog leaves with all four paws before the plank has reached the ground, it constitutes a fly-off and results in 5 faults. If the dog is deemed to leave the plank before it reached the ground *and* he misses the contact, he will only be penalized a total of 5 (five) faults.
- Missing the up contact point shall not be faulted.

## 6.4 Collapsible Tunnel (Chute)

The dog must enter the rigid end of the tunnel and exit through the collapsed fabric end of the tunnel.

- Backing out of the tunnel, exiting the entrance, or jumping over the rigid portion of the tunnel shall constitute a refusal.
- Jumping over the rigid portion of the tunnel when the collapsible tunnel is not the correct obstacle in the course sequence will be assessed a wrong course.
- Jumping or running over the flat end of the collapsible tunnel will not constitute a wrong course.
- The dog sliding and making casual contact with the rigid portion of the tunnel or fabric chute, or inadvertently touching the tunnel while turning away from it or running by, it will not constitute a wrong course.

## 6.5 Pipe Tunnel

The dog must enter the end of the tunnel designated by the judge and exit from the other end of the tunnel.

- Backing out of the tunnel, exiting via the entrance, or jumping over the tunnel shall constitute a refusal.
- If the dog attempts to enter through the exit end of the tunnel, a wrong course will be assessed. If the dog's nose breaks the plane of the tunnel entry, he has attempted to enter the tunnel; his body does not have to make physical contact with the tunnel in order to be called for a wrong course.
- Jumping over the tunnel when it is *not* the correct obstacle in the course sequence will be assessed a wrong course, unless this is done as part of the dog refusing a contact obstacle in which case it will be assessed a refusal.
- Coming in contact with the tunnel or jumping on it or over it when *it is* the next correct obstacle in sequence is explained in the diagram below.

## 6.6 Jumps

The dog must jump over the top bar, plank, or pole of the jump in the direction designated by the judge, crossing between the jump's two side standards/uprights without displacing the top bar, plank, or pole on the jump.

- Jumping over the jumps wings/standards or running under the bar will constitute a refusal.
- Taking the jump from the wrong direction or running under the bar from the wrong direction will constitute a wrong course.
- If the dog knocks down a lower bar or plank on the jump without displacing the top bar, plank, or pole then there is no fault.

A refusal at a jump must be corrected before continuing on course or a wrong course fault will be assessed. If the dog knocked over any part of the jump while in the process of refusing the obstacle, the handler must direct the dog through the wings or uprights in the correct direction before proceeding to the next obstacle to avoid a wrong course penalty.

## 6.7 Wall Jump

The dog must jump over the wall, passing between the 2 (two) pillars, in the direction designated by the judge without knocking any piece of the wall to the ground, including the pillars.

- Jumping up on the wall rather than trying to jump over it will constitute a refusal.
- Banking or pushing off the top of the wall in the process of attempting to jump the obstacle will not be faulted unless the dog displaces a piece of the wall.
- Taking the wall jump from the wrong direction will constitute a wrong course.

A refusal at the wall jump must be corrected before continuing on course or a wrong course fault will be assessed. If the dog knocked over any part of the wall jump while in the process of refusing the obstacle, the handler must direct the dog through the pillars in the correct direction before proceeding to the next obstacle to avoid a wrong course penalty.

## 6.8 Spread Jumps

The dog must jump over **both** top bars, planks, or poles of the jump in the direction designated by the judge, crossing between the jump's 2 (two) side standards/uprights without displacing **either** top bar, plank, or pole on the jump.

- Jumping over the jumps wings/standards, running under the bars, or failure to jump the front and back wing jumps comprising the spread as one unit will all constitute a refusal.
- Taking the jump from the wrong direction or running under the bars from the wrong direction will constitute a wrong course.
- **If the dog knocks down a lower bar or plank on the jump without displacing either of the two top bars, planks, or poles then there is no fault.**

A refusal at a spread jump must be corrected before continuing on course or a wrong course fault will be assessed. If a dog knocks over a spread jump or part of a jump while refusing the obstacle, the handler must direct the dog through the wings or uprights in the correct direction before proceeding to the next obstacle to avoid a wrong course penalty.

## 6.9 Long Jump

The dog must jump over the planks of the long jump without any of the planks falling over. The dog must cross between the front marker poles in the direction of the lowest plank, clear the span of the planks, and exit between the back marker poles.

- The dog will incur a fault if he walks on, paddles on, or steps between or on the planks. Paddling or stepping on a plank means that the bottom of the dog's foot is placed on the equipment or on the ground and is weight-bearing. If the dog is attempting to jump the obstacle and paddles or steps on or in between the planks, it is judged as a standard fault. If the dog is making no attempt to jump, then paddling or continuously stepping or in between the planks will be judged as a refusal.
- Casual contact with a plank or a marker pole by a dog or handler, or a marker pole being knocked over (even if this causes a plank to fall) will not be faulted.
- If the dog enters and exits the jump sideways or begins the jump in the correct direction, but then exits the side of the jump, a refusal will be assessed.
- Jumping the obstacle from the wrong direction will constitute a wrong course.

A refusal at the long jump must be corrected before continuing on course or a wrong course fault will be assessed.

It is recommended that golf tees or tape be used to pre-mark the placement of the planks.

## 6.10 Tire Jump

The dog must jump through the tire in the direction designated by the judge.

- Jumping between the frame and the tire or jumping over or under the tire constitutes a refusal.
- Taking the tire from the wrong direction, jumping between the frame and the tire, or jumping over or under the tire from the wrong direction, will constitute a wrong course.

A refusal at the tire must be corrected before continuing on course or a wrong course fault will be assessed.

The tire jump should be set up for a reasonably straight approach from the previous obstacle.

## 6.11 Table

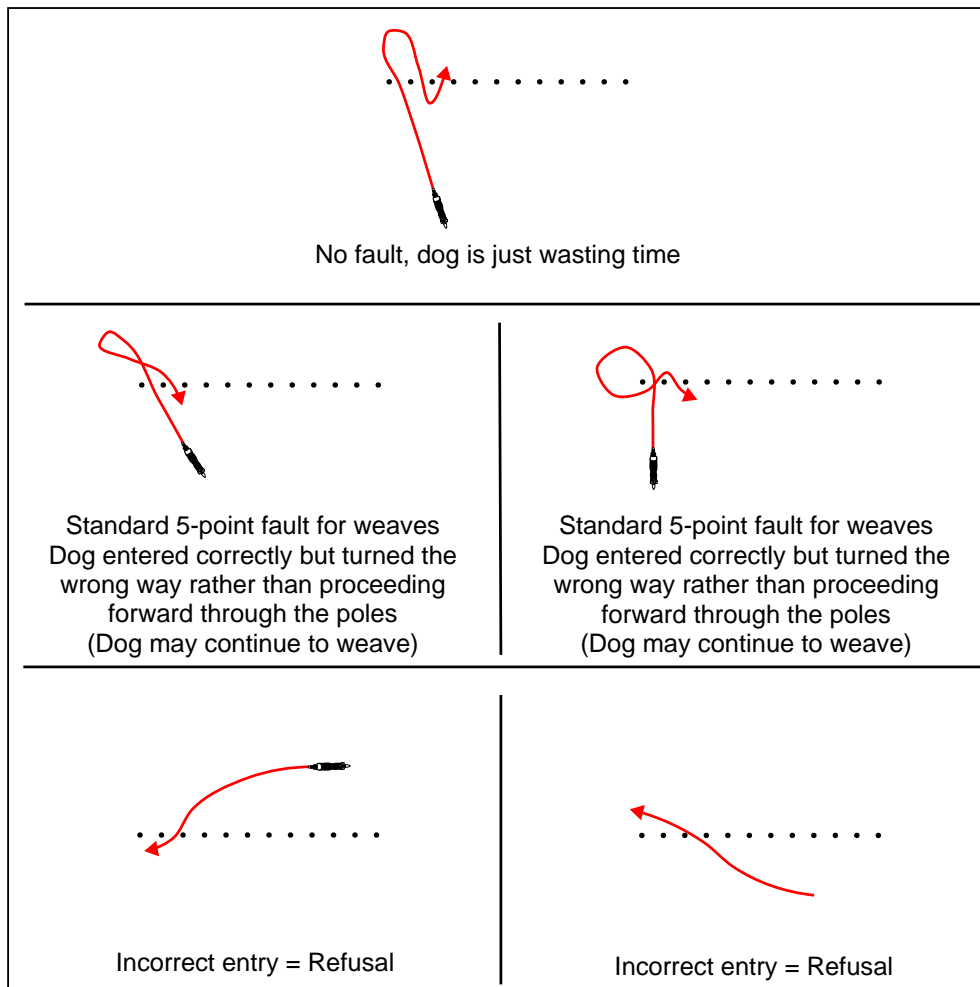

The table is not used in WAO competition.

## 6.12 Weave Poles

The dog must weave through the entire line of poles in a continuous *forward* motion, which begins by passing between poles #1 and #2 from right to left. He must then pass between poles #2 and #3 from left to right and continue this weaving pattern until he passes between the last two poles.

- *Each* incorrect entry is a refusal and will be assessed 5 faults. For example, if the dog misses the entry the first time he approaches the poles, he earns a refusal. If the handler brings the dog around to reattempt the poles, but the dog misses the entry again, he would earn a second refusal (an additional 5 faults).
- Once the dog enters correctly, the dog will only be faulted once (a 5-point standard fault) for a mistake during the duration of the weave poles.
- Failure to complete the obstacle correctly before negotiating another obstacle constitutes a wrong course.
- If the dog back weaves (that is, the dog weaves through two gates so that he takes 3 (three) poles in the wrong direction), a wrong course will be incurred.
- If the dog comes out of the poles, the dog must either re-enter the poles exactly where he came out or must re-start the weaves again. If the handler chooses to re-start the poles and the dog enters incorrectly, it is a refusal and will be faulted.

A refusal at the weave poles must be corrected before continuing on course or a wrong course fault will be assessed.

## 6.13 Start and Finish Lines

Also see the section on “Electronic Timing Systems.”

### 6.13.1 START LINE

When the handler goes to the start line, the back-up manual timer will be standing in front of the first jump. The electronic timing system will give a pre-determined start signal (a word such as “Ready” or “Go” or a beep) when the judge and timer are ready for the run to start. The backup timer will then step out of the handler’s way. The handler has 30 seconds in which to start their course run once the signal is given. Exceeding this time limit will be faulted as an elimination.

After removing the dog’s lead, the handler may not place the lead in front of their dog at the start line or it will be faulted for use of a training aid in the ring (elimination). The lead must be placed behind the dog or to the side.

The lead will be taken by a ring steward once the dog leaves the start line and placed at the exit of the ring in a designated contraband box. Only the handler may retrieve their lead from this box. **Anyone else removing the lead from the contraband box before the dog has exited the arena will result in an elimination.**

- If the handler chooses to lead out from the dog at the start line, they may not return to their dog once they have passed the plane of first obstacle. Passing back over the plane of the first obstacle will result in 5 faults, passing back over the plane and touching the dog will result in an elimination.
- Taking any obstacle before the start signal has been given will result in an elimination.
- The dog must start behind the plane of the start line. Setting up the dog past the plane of the start line will result in a 5-fault penalty.
- If the dog passes the plane of the first obstacle without taking that obstacle or commits a refusal during performance (for example, going under the bar of the first jump or between the tire and the frame, jumping the wing rather than the bar, etc.), the dog will earn a 5-fault refusal in Jumping, Agility, or Speedstakes regardless of whether he has triggered the start-line sensors. In Gamblers or Snooker, 5 points will be deducted from the dog's score. If the start-line sensors were not triggered, the manual backup timer keeper will start the stopwatch when the dog passes the plane of the first obstacle in the process of refusing it. The official time will be taken from the manual backup timer keeper's stopwatch after the dog crosses the finish line. In Gamblers and Snooker, a manual whistle will be blown to signal time. Handlers must fix the run-out or refusal error and have the dog take the obstacle correctly in the direction specified by the judge or it is an elimination.
- If the handler resets the dog, without touching him, after the dog has refused the first obstacle, he will earn another 5-fault refusal penalty. If the handler touches the dog while resetting him, it is an elimination.
- If the handler triggers the start-line sensors of the timing system instead of the dog in Jumping, Agility, or Speedstakes, they will earn a 5-fault penalty. In Gamblers or Snooker, 5 points will be deducted from the dog's score. In both cases, time will keep running.
- Handlers will be deemed late and unable to run (elimination) if they are not present to walk into the ring once the previous dog has crossed the finish line.

#### 6.13.2 FINISH LINE

- If a team manager or another team member is at the exit of the ring, they may not act in any way to enhance a dog's performance or that dog will be eliminated.
- If the handler triggers the finish-line sensors of the timing system instead of the dog in Jumping, Agility, or Speedstakes, they will earn a 5-fault penalty and time will be taken from the backup manual timer. In Gamblers or Snooker, 5 points will be deducted from the dog's score.
- Once a dog has negotiated the last obstacle, stopping the clock, judging of the course will cease unless the performance of this obstacle is faulted; for example, bar knocked and falling.

## 7. SCORING

All faults and refusals will be assessed 5 (five) faults unless stated differently below.

Eliminations will be assessed 50 faults plus 50 seconds will be added for the dog's course time, except in the Team Relay where the dog will be assessed 50 faults but seconds will not be added for the course time.

The maximum course faults a dog can accumulate is 50, whether by elimination or other combined course faults. So, for example, if a dog earns a refusal and a missed contact and then goes off course and is eliminated, his total course faults will be scored as 50.

### 7.1 Schedule of Faults and Penalties

#### 7.1.1 OBSTACLE FAULTS AND PENALTIES

Missed down contact point on seesaw, A-frame or dogwalk	5 faults
Flyoff on seesaw (no additional faults will be given if the dog also misses the contact zone)	5 faults
Displacing a bar, planks, or pole from a jump	5 faults
Knocking down any part of the wall, including the pillars	5 faults
Knocking a long jump plank	5 faults
Walking on, paddling on, or stepping between or on the planks of the long jump	5 faults
Entering the weave poles incorrectly, a refusal (assessed for each missed entry)	5 faults
Popping out of the poles after a correct entry (a one-time penalty)	5 faults
Running under the contact when the dog is attempting a tunnel under the contact	

#### 7.1.2 COURSE HANDLING AND PERFORMANCE FAULTS

Refusal	5 faults
Running the wrong course	Elimination
Back weaving	Elimination
Failure to complete an obstacle	Elimination
Failure to go through the uprights of a jump where the pole has already been knocked down	Elimination
3 (three) refusals on course	Elimination
Dog running under a contact obstacle when the next correct obstacle in sequence is the contact or a tunnel under the contact	5 faults
Dog running under a contact obstacle in any other scenario with the exception of Gamblers and the Snooker opening	Elimination
Dog wearing a collar	Elimination
Assistance from any person other than the handler that helps a dog gain an improved performance (referred to as outside assistance)	Elimination
Someone other than the handler removing a dog's leash from the designated contraband box before the dog has exited the arena will result in an elimination.	Elimination
Use of food or training/performance aids or devices during a run, including training/bait/bum bags and stopwatches	Elimination
Handler touching the equipment or the dog, whether accidentally or intentionally, in a manner that aids performance but, in the judge's opinion, does not avoid what would otherwise be an off-course. (Incidental contact with the dog or an obstacle that does not result in saving time or avoiding other course faults is not faulted.)	5 faults or 0 points for obstacle in Games
Handler touching the equipment or the dog, whether accidentally or intentionally, in a manner that prevents an off-course	Elimination
Handler going through, under, or over any obstacle (The handler may lean over an obstacle as long as they do not actually touch the obstacle, and they may break the line of the weave poles with their hand as long as they do not touch the dog or a pole.)	Elimination

Dog leaving the ring without finishing the course	Elimination
Dog fouling the ring (urinating, defecating, or vomiting)	Elimination
Dog cannot be caught at end of run and remains in ring, disrupting the next competitor	Elimination
Over standard course time: Any fraction of a second over course time will be added to the total number of faults as that fraction of time, for example, 1.492 seconds over time = 1.492 faults.	1 to 1 ratio

### 7.1.3 START AND FINISH LINE FAULTS AND PENALTIES

Dog passing the plane of the first obstacle without taking that obstacle or committing a refusal during performance of the first obstacle (for example, going under the first jump or between the tire and the frame, jumping the wing rather than the bar, etc.) regardless of whether he triggered the timing sensors or not. If the start-line sensors were not triggered, then the manual backup timer keeper will start the stopwatch when the dog passes the plane of the first obstacle in the process of refusing it. The official time will be taken from the manual backup timer keeper's stopwatch after the dog crosses the finish line. In Gamblers and Snooker, a manual whistle will be blown to signal time. Handlers must still fix the run-out or refusal error and have the dog take the obstacle correctly in the direction specified by the judge or it is an elimination.	5 faults or 5-point deduction in Games
Handler resetting (without touching) the dog after the dog has refused the first obstacle	5 faults or 5-point deduction in Games
Handler triggering the start or finish sensors of the timing system instead of the dog	5 faults or 5-point deduction in Games
Handler returning to the dog on the start line after the handler has passed the plane of the first obstacle	5 faults or 5-point deduction in Games
Handler setting up the dog at the start line past the plane of the first obstacle	5 faults or 5-point deduction in Games
Handler leading out past the plane of the first obstacle and, instead of starting the course, returning to the dog and passing back over the plane of the first obstacle.	5 faults or 5-point deduction in Games
Handler touching the dog while resetting him after the dog has refused the first obstacle	Elimination
Handler placing the dog's lead in front their dog at the start line	Elimination
Leading out past the plane of the first obstacle and, instead of starting the course, returning to the dog (passing back over the plane of the first obstacle) and touching the dog.	Elimination
Attempting or taking an obstacle before permission has been granted to begin the course	Elimination
Taking more than 30 seconds to start after the timing system start signal sounds	Elimination
Handler not present to walk into the ring once the previous dog has crossed the finish line	Elimination

#### 7.1.4 OTHER FAULTS AND PENALTIES

Repeating obstacles deliberately to practice/train a dog will be deemed as training in the ring The handler will be asked to leave the ring immediately.	Elimination & dismissal from event
Signs of aggression in the dog toward humans or other dogs	Elimination & dismissal from event
Unsportsmanlike conduct toward a judge, event official, event helper, or venue management	Elimination & dismissal from event
Directly challenging a judge regarding a call	Elimination & dismissal from event
Language or behavior in the ring construed to be detrimental to the spirit of good sportsmanship or that threatens to reduce the spectator appeal of the event	Elimination & dismissal from event
Violation of any rules of the property/facility where the event is being held, including ignoring no smoking area signage, rearranging practice equipment, failing to pick up after your dog, taking your dog into off-limits areas, damaging facility property, etc.	Elimination & dismissal from event
Abusive or harsh handling in or out of the competition ring	Elimination & dismissal from event
Dog unfit for competition in opinion of the official veterinarian or the WAO Organizing Committee	Elimination & dismissal from event
Failure to notify WAO officials that a handler is running a bitch in season	Elimination & dismissal from event

#### 7.1.5 FAULTS AND PENALTIES THAT APPLY ONLY TO TEAM RELAY

Dropping or throwing baton	10 faults
Faulty baton exchange: Handler or dog outside the exchange area when baton is being handed off	10 faults
Failure of a handler to run with the baton.	Elimination
Handler leaves the exchange area without the baton and the dog takes an obstacle before the handler retrieves the baton.	Elimination
Baton is dropped and the dog takes an obstacle before the handler has picked up the baton.	Elimination

## 7.2 Refusals

Refusals must be corrected by the handler or an off-course fault will be incurred in addition to the 5 faults for the refusal. For example, if the dog runs by a jump and the handler does not correct this by having the dog perform the jump in the intended direction, a wrong course penalty will apply.

If a dog knocks over a jump or part of a jump while refusing the obstacle, the handler must direct the dog through the wings or uprights in the correct direction before proceeding to the next obstacle to avoid a wrong course penalty.

## 7.3 Wrong Courses

The dog will be assessed with running the wrong course if he in any way touches, jumps over, or goes under an obstacle out of the designated course sequence or he begins to take an obstacle in the wrong direction.

- For the tunnel, the dog is deemed to be beginning the obstacle when his nose breaks the plane of the entry; he does not have to make contact with the tunnel to be called off course.
- For the weave poles, the dog is deemed to be beginning the obstacle if his nose breaks the plane between any 2 (two) poles.
- Jumping over the flat end of the collapsible tunnel or touching a sandbag without making contact with the tunnel does not constitute an off-course.
- Running under a contact obstacle when it is **not** the next obstacle in sequence is a wrong course except in the following instances: when the dog is attempting a tunnel under the contact (refusal), in Gamblers, in the opening of Snooker.

## 7.4 Timing & Equipment Failure

If during a competitor's run, the electronic timing fails, the time will be taken from a manual backup time keeper. If the manual timing also fails, the dog will be given a re-run. All faults from the first run will count. In the case of Gamblers or Snooker, the handler will start the new run with 0 (zero) points.

The handler is responsible for checking the course and making sure that the equipment is set correctly for their run. If there is an equipment failure during the run or it is immediately identified that an obstacle has been set incorrectly, the dog will be given a re-run. However, all faults or points from the first run will count with the exception of faults earned on the problem obstacle. If the dog ran clear the first time, he is just running the second time for time.

In the event of a re-run, the judge must deem that the handler has made a true and sportsman-like effort to complete the course correctly or additional faults can be added.

## 7.5 Interference with the Dog on Course

If a spectator, animal, or something in the environment interferes with the dog on course in a manner that is not considered normal for a large international spectator event, and the judge deems that interference to have had a detrimental effect on the dog's run, the judge may offer a re-run.

The judge will try to stop the handler as soon as the interference occurs. The competitor should then leave the ring, without performing any additional obstacles, and the re-run should occur within 5 (five) minutes.

All faults or points from the first run will count up to the point of the interference. The judge must deem that the handler has made a true and sportsman-like effort to complete the course correctly (e.g., work the contacts as the handler did in the first run) or additional faults can be added.

## 7.6 Questioning a Score

### 7.6.1 WHAT CAN BE QUESTIONED?

- Scribe mistakes and any other clerical errors
- Incorrect application of WAO rules that does not involve a judgement call; for example, if the judge signals a fault for an up contact on the dogwalk (which is not a fault under WAO rules) that call can be questioned.

Contact calls may not be challenged.

Refusals may not be challenged.

### 7.6.2 WHEN CAN A SCORE BE QUESTIONED?

The results of the last 5 (five runs) will be displayed on a computer monitor or on posted scribe sheets at the ring exit. This information must be checked by the team manager and the competitor within 5 (five) minutes of the conclusion of the run. Any mistake must immediately be brought to the attention of the WAO helper who is supervising the ringside results area. The helper will check the score and correct any clerical error. If the problem with the score is an incorrect application of a WAO rule, the helper will notify the ring manager to stop the ring as quickly as possible so the problem can be discussed with the judge. The decision of the judge is final.

Once the scribe sheet has been removed from the computer monitor or the posting area, it may no longer be questioned for any reason.

Results will be verified and printed at the close of the class and posted online and on notice boards, with copies available at the team manager's table.

Competitors and team officials cannot directly challenge a judge in any instance or they face dismissal from the event.

Competitors and team officials who use social media to dispute a judge's call or cast aspersions about the results of the event may be dismissed from the event and banned from future events as seen fit by the WAO organizing committee.

## 7.7 Collars and Leads

Dogs must not wear any type of slip or half-slip lead, head collar, muzzle, harness, or collar while competing.

Stop pad protectors may be worn by a dog if approved by the event veterinarian. Handlers that run dogs with stop pad protectors do so at their own risk.

Electric collars may not be used anywhere on the WAO grounds. Citronella spray collars or similar devices are not permitted within 50m (approx. 164+ feet) of a competition ring. Handlers in breach of this rule will be asked to leave the event.

## 8. EQUIPMENT SPECIFICATIONS

The following obstacles meet with the approval of WAO. A 1.5cm (.59in) variable on measurements will be accepted except for jump height cups and weave pole distances. The event equipment supplier must be approved by the WAO committee and will be publicized before the event.

### 8.1.1 WING JUMPS

Width of wings: 400mm (15.75in) minimum

Length of poles: 1.20m (3.93ft) minimum. 1.5m (4.92ft) maximum

Plank length: 1.20m (3.93ft) minimum. 1.5m (4.92ft) maximum

Pole thickness: 40mm (1.57in) minimum, 51mm (2in) maximum

Pole weight: 1.0-1.2 kg

The heights available must be: 200mm, 300mm, 400mm, 525mm, and 600mm

The top bar or plank must be easily displaced by the dog

### 8.1.2 WALL JUMP

A wall should have displaceable units on the top

The width of central jumping area is 1220mm (4ft), excluding pillars

Depth of wall is 280mm (11.02in) at base and 135mm (5.31in) at highest point

Pillar height 1220mm (4ft) and 300mm (11.81in) square width

Displaceable blocks and tiles on top no greater than 170mm (6.69in) wide

The heights available must be: 200mm, 300mm, 400mm, 525mm, and 600mm

### 8.1.3 SPREAD JUMP

A spread jump is made by placing two wing jumps together with the poles set at ascending heights

The heights available must be: 200mm, 300mm, 400mm, 525mm, and 600mm

The back bar of the spread will be set at the same height as the regular jump height. The front bar of the spread will be set at least one jump height lower than the back bar for the 300mm, 400mm, and 525mm divisions. For the 600mm division, the front bar must be set at 400mm.

Length of spread: Defined in jump height table. The length will be measured from the front side of the front bar to the back side of the back bar.

### 8.1.4 TIRE

The tire consists of a hoop mounted in a rigid frame. The height of the hoop must be adjustable.

Diameter of hoop aperture: 455mm (17.91in) minimum

Width of hoop side walls: 100mm-110mm (3.93-4.33in)

The frame must not be higher than the top of the hoop when the hoop is set at maximum height

The hoop must be closely coupled to the frame (that is, not suspended by a chain or other mechanism) and secured in such a way that dogs cannot knock the obstacle over from either direction.

Displaceable tires are not allowed.

The heights available, measured in a straight line from the ground to the center of the hoop, must be: 450mm, 550mm, 675mm, and 750mm

### **8.1.5 LONG JUMP**

The long jump is comprised of two to five boards:

300mm: 2 boards

400mm: 3 boards

525mm: 4 boards

600mm: 5 boards

Length of boards: 1200mm (47.25in) minimum

Height of first board: 130mm (5.11in)

Height of second board: 180mm (7.08in)

Height of third board: 230mm (9.05in)

Height of fourth board: 305mm (12in)

Height of fifth board: 380mm (14.96in)

Maximum length of jump: Defined in jump height table

Marker pole height: 1.20m (4ft) minimum

The marker poles should be placed at each corner and should not be attached to any part of the obstacle.

### **8.1.6 COLLAPSIBLE TUNNEL (CHUTE)**

The collapsible tunnel consists of a rigid construction entry attached to a fabric sleeve.

Height of rigid entry: 480mm (18.89in) minimum to 600mm (23.62in) maximum

Depth of rigid entry: 450mm (17.71in) minimum to 600mm (25.59in) maximum

Diameter of fabric opening: 610mm (24in) minimum, 760mm (29.92in) maximum

Length of fabric chute: 2.6m (8.53ft) minimum to 2.8m (9.19ft) maximum

The material shall be circular and of a non-rigid (PVC or canvas) construction. The exit must be able to be weighted or fixed to the ground. The entrance must be a rigid construction that can be fixed or weighted to the ground and it must have suitable padding with the floor having a non-slip surface.

### **8.1.7 PIPE TUNNEL**

Diameter: 600mm (23.62in) minimum

Length: 3.0m to 6.0m (9ft to 20ft)

Distance between wire supports (the pitch): 101mm (4in) to 200mm (8in) with a mean of 175mm (7in)

Material must be made of PVC and be at least 620 grams (21.87 ounces)

**Note: Tunnels that are 3.0m or 4.0m long may only be used in a straight configuration; no bends.**

### **8.1.8 WEAVE POLES**

The number of poles should be six or twelve. The poles must be rigid construction.

Pole height: 850mm (33.46in) to 1m maximum (3.28ft)

Pole diameter: 30mm (1.18in) to 40mm (1.57in)

Distance between poles: 600mm (23.62in)

Maximum height of base: 10mm (.39in)

### 8.1.9 A-FRAME

The A-frame is constructed of two ramps, hinged at the apex

Length of ramp: 2.75m (9ft)

Width of ramp: 915mm (36.02in)

Height at apex: 1.7m (66.92in)

The last 1.05m (41.33in) of the bottom of each ramp is a contact point and must be a different color

Each ramp will have a non-slip surface and anti-slip slats at regular intervals of approximately 25cm (9.84in), but not within 10cm (3.93in) of the start of the contact area.

Slat height: 5mm-10mm (.196in-.39in)

Slat width: 20mm-35mm (.78in-1.37in)

### 8.1.10 SEESAW

The seesaw consists of a plank firmly mounted on a central bracket

Length of plank: 3.65m (12ft) minimum to 3710mm (12.16ft) maximum

Width of plank: 300mm (11.81in)

Height of center of plank: 61cm (24in) measured from the ground to the top of the plank

Height of end of plank: 1180-1210mm (46.45-47.63in) measured from the ground to the top of the plank

The last 915mm (3ft) of each end of the plank is a contact point and must be a different color

The plank will have a non-slip surface, but must not have anti-slip slats

The seesaw must tip between 2-3 seconds when a weight of 1 kilo (2.20lbs) is placed in the center of the down contact area of the obstacle.

### 8.1.11 DOGWALK

The dogwalk consists of a central plank with firmly fixed planks at either end

Length of planks: 3.65m (12ft) minimum to 3710mm (12.16ft) maximum

Width of plank: 300mm (11.81in)

Center plank height: 120cm (47.25in) measured from the ground to the top of the plank

The last 915mm (3ft) of the bottom of each ramp is a contact point and must be a different color

Each plank will have a non-slip surface, with the two end planks also having anti-slip slats at intervals of approximately 280mm (11in), but not within 150mm (6in) of the start of the contact area

Slat height: 6mm-10mm (.23in-.39in)

Slat width: 20mm-35mm (.78in-1.37in)

## 9. ELECTRONIC TIMING SYSTEM

A timekeeper shall be assigned to monitor and reset the electronic timing system under direction of the judge.

Time shall be measured to 1/1000th of a second.

Sensors should be positioned to form a start and finish line at a position on or immediately in front of the first obstacle and on or immediately beyond the last obstacle. The placement of the sensors must not impede the performance path of handler or dog.

The course distance is measured from the start and finish lines as defined by the sensors.

- If the dog passes the plane of the first obstacle in the process of refusing it, therefore failing to trigger the timing sensors, the manual timer will start their stopwatch. The official time will be taken from the manual timer's stopwatch after the dog crosses the finish line. In addition, for a Jumping, Agility, or Speedstakes course the dog will earn a 5-fault refusal penalty plus a 5-second time fault penalty. For Gamblers and Snooker, 5 points will be deducted from the score earned.
- If a dog runs under the bar of the last jump, a refusal will be assessed. If he trips the sensors in doing so, the official time will be taken from the backup timer's stopwatch, which will continue to run until the dog has attempted the jump correctly and passed through the sensors.
- If a dog takes the last jump out of sequence, a wrong course will be assessed. If he trips the sensors in doing so, the timer will press the restart button so that the clock continues to run. Time will not stop until the dog has completed the jump in its proper numbered sequence and passed through the sensors again. If the electronic timer fails to be restarted, then the manual timer will be used for the official time.
- If the dog runs past or refuses the last jump, a refusal will be assessed. The clock will continue to run until the dog completes the last jump and goes through the sensors to stop time. If the dog leaves the ring without completing the last jump of a Jumping, Agility, or Speedstakes course, he has failed to complete the course and will be eliminated.
- If the dog takes the last jump and goes under or over the timing sensors, failing to trigger them and stop the clock, then the manual timer will be used for the official time.
- If a handler triggers the start or finish sensors instead of the dog in a Jumping, Agility, or Speedstakes course, a 5-point fault will be scored. In Gamblers and Snooker, 5 points will be deducted from the score earned. If it is the start sensors the handler triggers, then time will keep running and will not be restarted.

### 9.1.1 COURSE DESIGN CONSIDERATIONS

Start/finish lines must be designed so that a backup timer can be on course as a timekeeper in the event of failure of the electronic timing system.

When the start sensors are placed on the plane of the obstacle, the only obstacles that may be used for a starting obstacle are jumps of any type, including the tire jump but excluding the long jump.

When the finish sensors are placed on the plane of the obstacle, the only obstacles that may be used for a finish obstacle are: 1) jumps of any type (including the tire jump, but excluding the long jump) and 2) pipe tunnels.

## 10. REFUSAL GUIDELINES

A refusal is defined as

- Significant hesitation in front of an obstacle
- Turning back from an obstacle after beginning an approach **towards** it
- Running past the obstacle to be performed
- Improperly performing an obstacle as described in the “Obstacle Performance Standards.”

The refusal line shall be defined as the front plane of an obstacle.

The refusal line only becomes active when the judge deems that the dog has started to approach the obstacle.

Dogs are subject to refusals until they are completely on or in an obstacle with all four feet. So a dog that enters the tunnel, steps onto a contact, or enters the weave poles and then stops with fewer than four paws on or in the obstacle is subject to a refusal call. Once on a contact (or in a tunnel) with all four feet, the dog may stop, spin in circles, or reverse direction without penalty; as long as the dog exits the obstacle correctly. If, however, the dog dismounts the obstacle (e.g., jumps off a contact or backs out of a tunnel), he will be given a refusal fault and is then subject to refusals on the re-approach to the obstacle.

**10.1.1 REFUSALS ON THE APPROACH TO CONTACT OBSTACLES**

### 10.1.2 REFUSAL LINE FOR WEAVE POLES

The weave pole refusal plane varies based on which side of the weaves the dog is approaching: “on-side” or “off-side.” The dog must make the entry by pole #2.

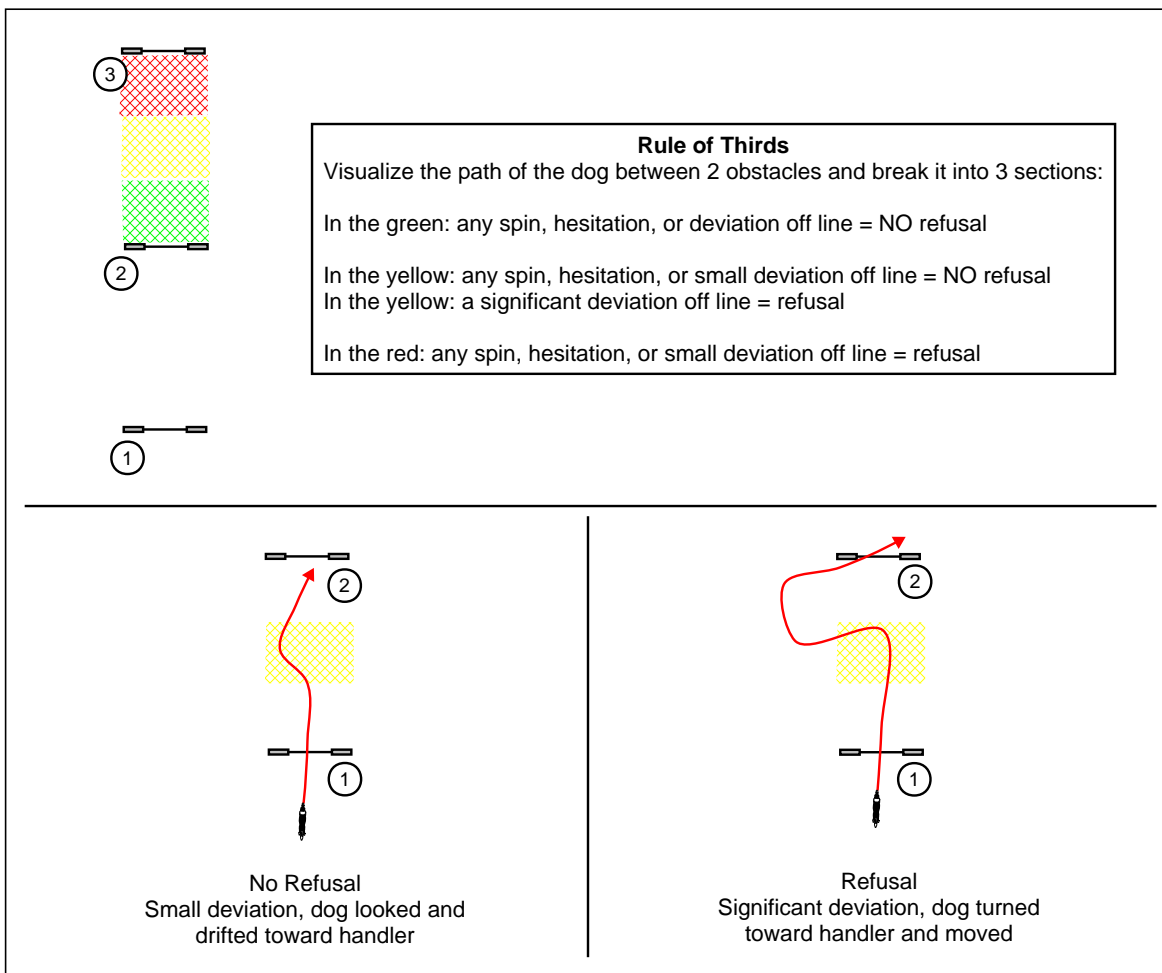

### 10.1.4 RULE OF THIRDS

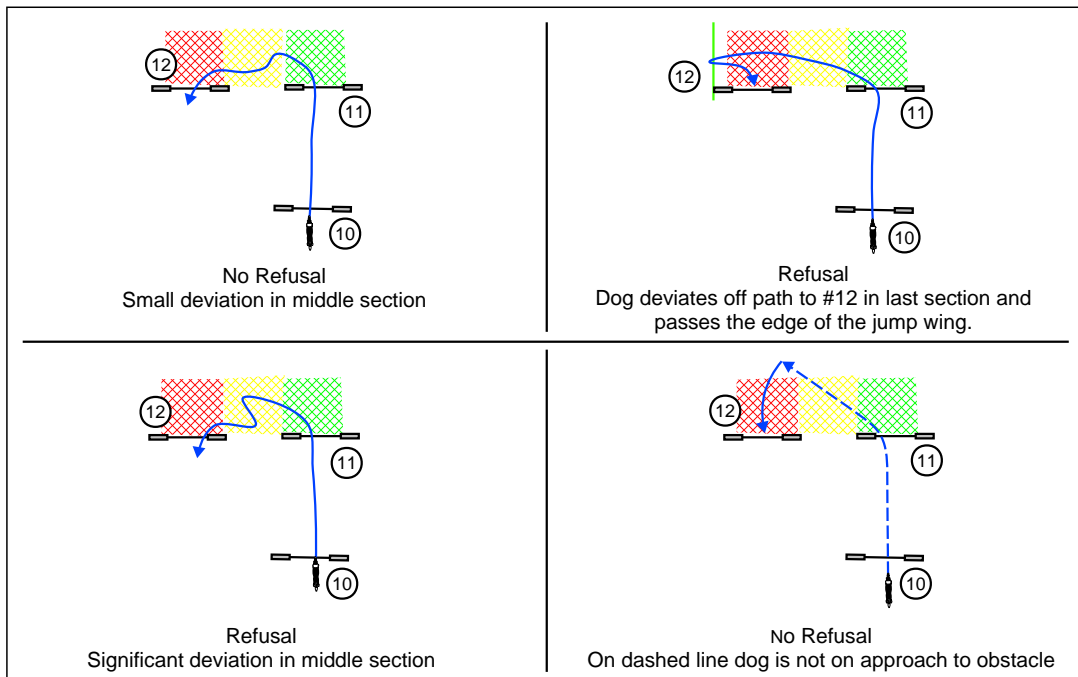

To help judges determine when a spin, a hesitation, or a deviation off line is considered a refusal, we use the rule of thirds.

Visualize the path of the dog between 2 (two) obstacles and break it into 3 (three) sections:

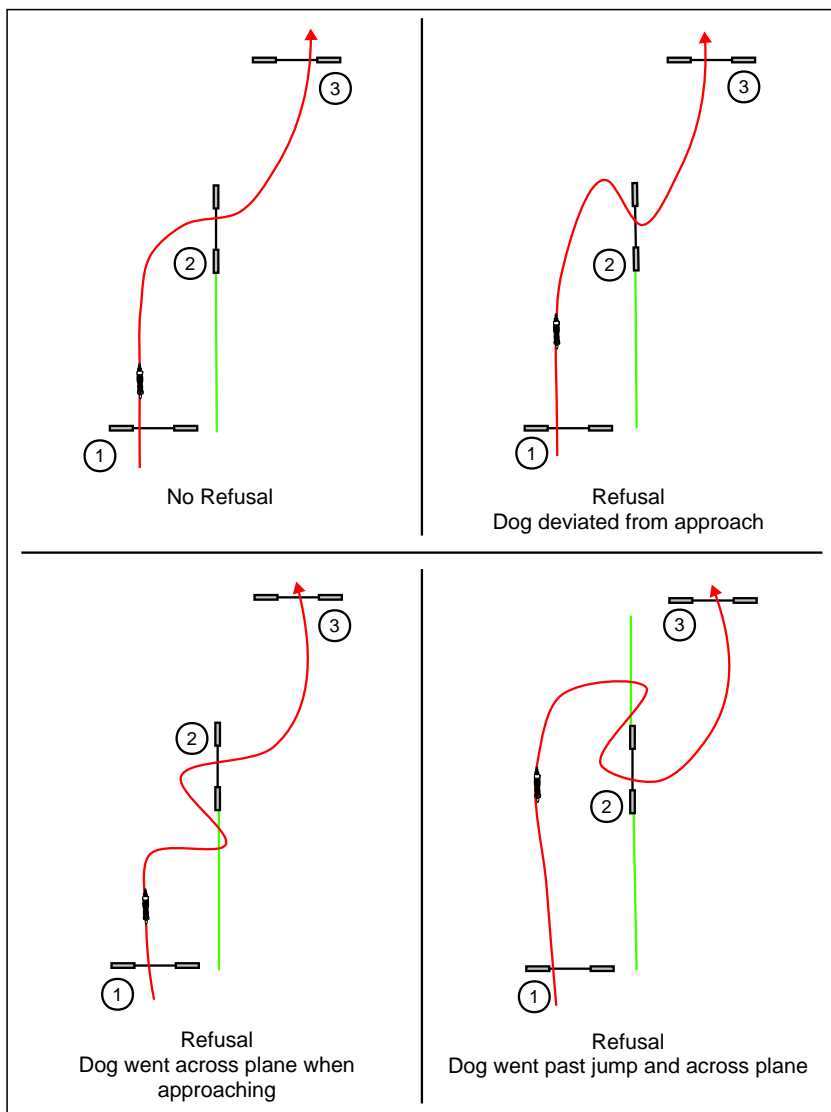

- In the first one-third the dog is landing or leaving the prior obstacle and orienting toward the next obstacle. A refusal cannot be called in this section.
- In the second one-third, the middle ground between two obstacles, only a significant deviation off the dog's line to the next obstacle can be called a refusal.
- In the final one-third, closest to the next obstacle and the final approach, any spin, hesitation, or deviation off line is a refusal. A significant hesitation is as long as it takes the judge to say the words, "significant hesitation."

**10.1.5 EXAMPLES OF RULE OF THIRDS**

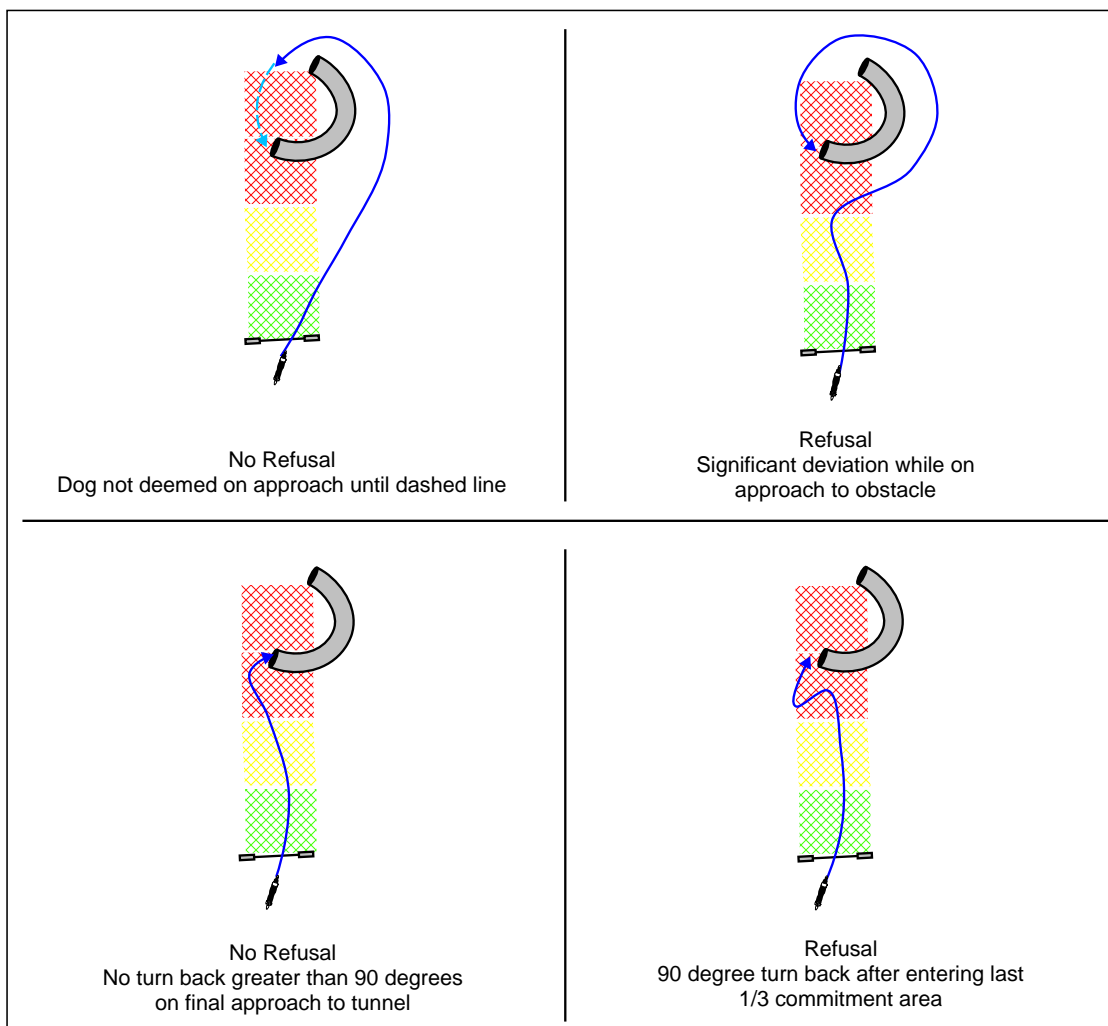

### 10.1.6 ADDITIONAL REFUSAL CLARIFICATIONS

**10.1.7 BLIND TUNNEL ENTRY REFUSAL/POINT OF COMMITMENT CLARIFICATION**

### 10.1.8 MISSED CONTACTS VERSUS REFUSALS

- **For the A-frame and Dogwalk:** Leaving the obstacle prior to beginning descent of the down ramp—defined as the dog touching the down ramp with *any* portion of his body—shall constitute a refusal. If the dog touches the down ramp and then leaves before touching the contact point, it is a missed contact, *not* a refusal.
- **For the Seesaw:** If the dog leaves the obstacle before the pivot point, a refusal will be incurred. Once the dog passes the pivot point with *any* portion of his body and then leaves before touching the contact point, it is a missed contact, *not* a refusal. Leaving the obstacle on descent with all four paws before the plank has reached the ground, constitutes a fly-off. If the dog is deemed to leave the plank before it reaches the ground, and misses the contact, this will only constitute one fault.

### 10.1.9 TUNNEL UNDER A CONTACT

**Tunnel under the A-frame:** If there is a tunnel positioned under the A-frame and the dog runs past the A-frame while attempting that obstacle, and he touches the tunnel with any part of his body or jumps over it while attempting to get on the A-frame, only a refusal fault will be given.

Once the dog is on the A-frame (either on the up ramp or the down ramp), if he jumps or falls off of the obstacle and subsequently touches or jumps over the tunnel, regardless of where the tunnel is positioned under the A-frame, only faults relating to the A-frame performance will be given.

**If the dog goes under the A-frame while attempting a tunnel under the contact, it a refusal fault.**

**Tunnel under the Dogwalk:** If there is a tunnel positioned under the dogwalk and the dog runs past the dogwalk while attempting that obstacle, and he touches the tunnel with any part of his body or jumps over it while attempting to get on the dogwalk, only a refusal fault will be given.

Once the dog is on the dogwalk (either on the up ramp, middle ramp, or the down ramp), if he jumps or falls off of the obstacle and subsequently touches or jumps over the tunnel, regardless of where the tunnel is positioned under the dogwalk, only faults relating to the dogwalk performance will be given.

**If the dog goes under the dogwalk while attempting a tunnel under the contact, it a refusal fault.**

## **11. APPENDIX 1: GENERAL AGREEMENT FOR ENTRY TO WAO**

### **11.1.1 GENERAL AGREEMENT ACCEPTANCE**

Through my entry, I declare that I and my Team have read and understand the WAO Official Rules & Regulations (which may be viewed and printed online at <http://www.worldagilityopen.com/rules.html>), the General Agreement, and the provisions set forth for entry to this event, and I acknowledge that we agree to abide by all such rules, regulations, policies and provisions stipulated therein, including any provisions incorporated by reference.

I accept and agree to abide by any and all rulings of the organizing committee relative to matters related to this event.

### **11.1.2 WAIVER OF LIABILITY**

In consideration of the acceptance of this entry and the opportunity to participate and/or to be judged in the event on the dates to which this entry form applies (the "Event"), I agree to hold harmless each of the parties listed below (including each of their members, officers, directors, agents and employees), hereinafter collectively referred to as the "Event Organizers," from any claim for loss or injury that may be alleged to have been caused directly or indirectly to any person or thing by the act of myself or the dog listed on the entry form while in or upon the event premises or grounds or near any entrance thereto:

- The event's local organizing committee
- The World Agility Open Championships Organizing Committee and their affiliated companies
- Event sponsors
- Property owners of the premises upon which the event is held

I further agree to hold harmless the event organizers from any claim for loss or injury of the dog listed on my entry form for the event as a result of disappearance, theft, death or other act, whether such loss or injury is caused or alleged to be caused for any reason, including negligence. I assume all responsibility and liability for any claims referenced in this "general agreement," including legal fees.

### **11.1.3 MEDIA RIGHTS RELEASE**

Through the Team's entry, I hereby grant to WAO and its affiliated companies, representatives, agents and assigns, all rights and permission to use or appropriate his/her and their dog's name, biography, likeness, photograph, voice, performing persona, or other indicia of identity for broadcast, telecast, cablecast, transmission or distribution in any format or media known now or in the future.

### **11.1.4 WAIVER OF RIGHTS TO PRIVACY, PUBLICITY, AND PERSONALITY**

Further, I hereby release WAO and its affiliates, representatives, agents and assigns from any claim or cause of action for invasion of the rights of privacy, right of publicity, right of personality, or any similar right.

### **11.1.5 ELECTRONIC ENTRY SUBMISSION**

Through my submission of an electronic entry to the event, I acknowledge, accept, and agree to abide by the provisions of this General Agreement, and all policies, rules, regulations, and conditions of entry to the event. Further, if the entry is for a minor, I represent and warrant that I am the parent or legal guardian of the competitor/handler entered in the event, and I acknowledge that I have reviewed all provisions of this General Agreement, policies, rules, regulations, and conditions of entry to the event with the minor and I shall be solely responsible for their actions and compliance with all rules, regulations, policies, and provisions for the event, and assume full liability for minor's actions and actions of their dog.

#### **11.1.6 REFUNDS**

There shall be no refunds for entries withdrawn after the entry closing date, for absentee handlers or teams, for dismissal from the event as a result of disciplinary action, for dismissal from a class, or for any other reason. Also, no entry fees will be refunded if the event cannot open or be completed by reason of riots, civil disturbances, acts of terrorism, fire, “acts of God,” public emergency, strike, or any other cause beyond the control of WAO.

#### **11.1.7 CLASS ENTRY**

I understand that if I do not submit the class entry by 1 May, the class entry will be made from the information on this Team Entry Form. The first 3 (three) dogs listed on the Entry Details page will be entered into Pentathlon. The next 3 (three) dogs will then be entered in the Biathlon, and the next 3 into Games. Once all dogs have been entered in one class, we will then start again from the top of the list.

## 12. APPENDIX 2: QUICK REFERENCE TABLES

### JUMP HEIGHT & A-FRAME HEIGHT TABLE

JUMP HEIGHT	DOG HEIGHT AT WITHERS	JUMP HEIGHT	A-FRAME HEIGHT	ASCENDING SPREAD LENGTH	LONG JUMP LENGTH	TIRE HEIGHT AT CENTER
300	320mm & under	300mm	1.7m	260-280mm	600mm 2 boards	450mm
400	410mm & under	400mm		350-370mm	800mm 3 boards	550mm
525	500mm & under	525mm		465-485mm	1050mm 4 boards	675mm
600	Over 500mm	600mm		540-560mm	1200mm 5 boards	750mm

### ASCENDING SPREAD JUMPS

JUMP HEIGHT	FRONT BAR HEIGHT	BACK BAR HEIGHT	LENGTH Measured from front of front bar to back of back bar
300	200	300	260-280mm
400	300	400	350-370mm
525	400	525	465-485mm
600	400	600	540-560mm

**DOGWALK CENTER PLANK HEIGHT:** 120cm (47.25in) measured from ground to top of plank

**HEIGHT OF CENTER OF SEESAW PLANK:** 61cm (24in) measured from ground to top of plank

### GAMBLERS OBSTACLE POINTS

POINTS	OBSTACLE
1 point	Jumps
2 points	Tunnels Tire Long Jump Spread Jumps Wall Jump
3 points	Seesaw 6 weave poles
4 points	A-frame
5 points	Dogwalk 12 weave poles
